

# EECS 10: Computational Methods in Electrical and Computer Engineering

## Lecture 4

Rainer Dömer

doemer@uci.edu

The Henry Samueli School of Engineering  
Electrical Engineering and Computer Science  
University of California, Irvine

## Lecture 4: Overview

- Warm-up Quiz
- Our second C Program
  - Program structure
  - Example `Addition.c`
  - Variables
  - Data input
  - Computation
  - Data output

## Quiz: Question 1

- Today's computers run at which clock speed?
  - a) 10 kHz
  - b) 1 ms
  - c) 1 GHz
  - d) 100 km/h
  - e) 1 MHz

## Quiz: Question 1

- Today's computers run at which clock speed?
  - a) 10 kHz
  - b) 1 ms
  -  c) 1 GHz
  - d) 100 km/h
  - e) 1 MHz

## Quiz: Question 2

- Which Unix command shows you the contents of the current directory?
  - a) `pwd`
  - b) `ls`
  - c) `dir`
  - d) `list`
  - e) `cd`

## Quiz: Question 2

- Which Unix command shows you the contents of the current directory?
  - a) `pwd`
  -  b) `ls`
  - c) `dir`
  - d) `list`
  - e) `cd`

## Quiz: Question 3

- Which of the following Unix commands renames file “text1” into “homework1”?
  - a) `ren text1 homework1`
  - b) `mv text1 homework1`
  - c) `rm text1 homework1`
  - d) `rm homework1 text1`
  - e) `ren homework1 text1`

## Quiz: Question 3

- Which of the following Unix commands renames file “text1” into “homework1”?
  - a) `ren text1 homework1`
  -  b) `mv text1 homework1`
  - c) `rm text1 homework1`
  - d) `rm homework1 text1`
  - e) `ren homework1 text1`

## Quiz: Question 4

- What is C *not*?
  - a) a structured programming language
  - b) a compiled programming language
  - c) a high-level programming language
  - d) a portable programming language
  - e) a object-oriented programming language

## Quiz: Question 4

- What is C *not*?
  - a) a structured programming language
  - b) a compiled programming language
  - c) a high-level programming language
  - d) a portable programming language
  -  e) a object-oriented programming language

## Quiz: Question 5

- What is the meaning of the following code fragment?

```
/* printf("C programming is great!\n") */
```

- a) it prints “C programming is boring!”
- b) it is the main function of the C program
- c) it is a comment ignored by the compiler
- d) it prints “C programming is great!”
- e) it is a syntax error because a semicolon is missing after the `printf()` statement

## Quiz: Question 5

- What is the meaning of the following code fragment?

```
/* printf("C programming is great!\n") */
```

- a) it prints “C programming is boring!”
- b) it is the main function of the C program
-  c) it is a comment ignored by the compiler
- d) it prints “C programming is great!”
- e) it is a syntax error because a semicolon is missing after the `printf()` statement

## Quiz: Question 6

- What is *not* true about of the following compiler call?

```
% gcc -Wall -ansi HelloWorld.c -o HelloWorld
```

- the GNU C Compiler is called to generate an executable program called `HelloWorld`
- the compiler will print warning and/or error messages about any non-ANSI compliance in the code
- the compiler will read the file `HelloWorld.c`
- the compiler will ignore all warnings
- the compiler will assume that `HelloWorld.c` is an ANSI-compliant C program

## Quiz: Question 6

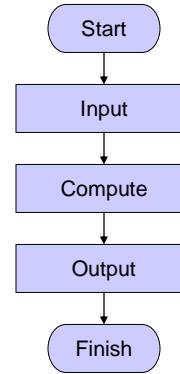

- What is *not* true about of the following compiler call?

```
% gcc -Wall -ansi HelloWorld.c -o HelloWorld
```

- the GNU C Compiler is called to generate an executable program called `HelloWorld`
- the compiler will print warning and/or error messages about any non-ANSI compliance in the code
- the compiler will read the file `HelloWorld.c`
- the compiler will ignore all warnings
- the compiler will assume that `HelloWorld.c` is an ANSI-compliant C program

## Program Structure

- General Program Structure
  - Input
    - read input data
  - Computation
    - compute output data from input data
  - Output
    - write output data
- Examples
  - Calculator
    - Enter numbers, compute function, output result
  - Word processor
    - Type, format, print text
  - Database application
    - Enter data, process data, present data
  - etc.

EECS10: Computational Methods in ECE, Lecture 4

(c) 2005 R. Doemer

15

## C Program Structure

- Initialization section
  - Definition of variables (storage elements)
    - Name, type, and initial value
- Input section
  - read values from input devices into variables
    - standard input functions
- Computation section
  - perform the necessary computation on variables
    - assignment statements
- Output section
  - write results from variables to output devices
    - standard output functions
- Exit section
  - clean up and exit

EECS10: Computational Methods in ECE, Lecture 4

(c) 2005 R. Doemer

16

## Our second C Program

- Program example: **Addition.c** (part 1/2)

```
/* Addition.c: adding two integer numbers */
/*
 * author: Rainer Doemer
 */
/* modifications:
 * 09/30/04 RD initial version
 */

#include <stdio.h>

/* main function */

int main(void)
{
    /* variable definitions */
    int i1 = 0;          /* first integer */
    int i2 = 0;          /* second integer */
    int sum;             /* result */
    ...
}
```

## Our second C Program

- Program example: **Addition.c** (part 2/2)

```
...
/* input section */
printf("Please enter an integer:      ");
scanf("%d", &i1);
printf("Please enter another integer: ");
scanf("%d", &i2);

/* computation section */
sum = i1 + i2;

/* output section */
printf("The sum of %d and %d is %d.\n", i1, i2, sum);

/* exit */
return 0;
} /* end of main */

/* EOF */
```

## Our second C Program

- Variable definition and initialization

```
/* variable definitions */  
int i1 = 0;           /* first integer */  
int i2 = 0;           /* second integer */  
int sum;              /* result */
```

- Variable type: **int**
  - integer type, stores whole numbers (e.g. -5, 0, 42)
  - many other types exist (**float**, **double**, **char**, ...)
- Variable name: **i1**, **i2**, **sum**
  - valid identifier, i.e. name composed of letters, digits
  - variable name should be descriptive
- Initializer: **= 0**
  - specifies the initial value of the variable
  - optional (if omitted, initial value is undefined)

## Our second C Program

- Data input using **scanf()** function

```
/* input section */  
printf("Please enter an integer:      ");  
scanf("%d", &i1);
```

- part of standard I/O library
  - declared in header file **stdio.h**
- reads data from the standard input stream **stdin**
  - **stdin** usually means the keyboard
- converts input data according to format string
  - "%d" indicates that a decimal integer value is expected
- stores result in specified location
  - **&i1** indicates to store at the *address of* variable **i1**

## Our second C Program

- Computation using assignment statements

```
/* computation section */  
sum = i1 + i2;
```

- Operator = specifies an assignment
  - value of the right-hand side (`i1 + i2`) is assigned to the left-hand side (`sum`)
  - left-hand side is usually a variable
  - right-hand side is a simple or complex expression
- Operator + specifies addition
  - left and right arguments are added
  - result is the sum of the two arguments
- May other operators exist
  - For example, `-`, `*`, `/`, `%`, `<`, `>`, `==`, `^`, `&`, `|`, ...

## Our second C Program

- Data output using `printf()` function

```
/* output section */  
printf("The sum of %d and %d is %d.\n", i1, i2, sum);
```

- part of standard I/O library
  - declared in header file `stdio.h`
- writes data to the standard output stream `stdout`
  - `stdout` usually means the monitor
- converts output data according to format string
  - standard text is copied verbatim to the output
  - `%d` is replaced with a decimal integer value
- takes values from specified arguments
  - `i1` indicates to use the value of the variable `i1`

## Our second C Program

- Example session: `Addition.c`

```
% vi Addition.c
% ls -l
-rw----- 1 doemer faculty 702 Sep 30 14:17 Addition.c
% gcc -Wall -ansi Addition.c -o Addition
% ls -l
-rwx----- 1 doemer faculty 6628 Sep 30 16:44 Addition*
-rw----- 1 doemer faculty 702 Sep 30 14:17 Addition.c
% Addition
Please enter an integer: 27
Please enter another integer: 15
The sum of 27 and 15 is 42.
% Addition
Please enter an integer: 123
Please enter another integer: -456
The sum of 123 and -456 is -333.
%
```
