

# EECS 10: Computational Methods in Electrical and Computer Engineering

## Lecture 16

Rainer Dömer

doemer@uci.edu

The Henry Samueli School of Engineering  
Electrical Engineering and Computer Science  
University of California, Irvine

## Lecture 16: Overview

- Course administration
  - Reminder: Midterm course evaluation
- Data Structures
  - Introduction
  - Arrays
    - Introduction
    - Indexing
    - Initialization
    - Multi-dimensional arrays
    - Operator associativity and precedence
  - Example
    - `Histogram.c`

## Course Administration

- Midterm Course Evaluation
  - This week!
  - Oct. 27, 2006, 8am - Nov. 2, 2006, 12pm
  - Online via EEE Evaluation application
- Feedback from students to instructors
  - Completely voluntary
  - Completely anonymous
  - Very valuable
    - Help to improve this class!
- Mandatory Final Course Evaluation
  - expected for week 10 (TBA)

EECS10: Computational Methods in ECE, Lecture 16

(c) 2006 R. Doemer

3

## Data Structures

- Introduction
  - Until now, we have used (mostly) single data elements of basic (non-composite) type
    - integral types
    - floating point types
  - Most programs, however, require complex *data structures* using composite types
    - arrays, lists, queues, stacks
    - trees, graphs
    - dictionaries
  - ANSI C provides built-in support for
    - Arrays
    - Structures, unions, enumerators
    - Pointers

EECS10: Computational Methods in ECE, Lecture 16

(c) 2006 R. Doemer

4

## Arrays

- Array data type in C
  - Composite data type
    - Type is an array of a sub-type (e.g. array of `int`)
  - Fixed number of elements
    - Array size is fixed at time of definition (e.g. 100 elements)
  - Element access by index (aka. subscript)
    - Element-access operator: `array[index]` (e.g. `A[42]`)
- Example:

```
int A[10]; /* array of ten integers */

A[0] = 42; /* access to elements */
A[1] = 100;
A[2] = A[0] + 5 * A[1];
```

EECS10: Computational Methods in ECE, Lecture 16

(c) 2006 R. Doemer

5

## Arrays

- Array Indexing
  - Start counting from 0
    - First element has index 0
    - Last element has index Size-1
- Example:

```
int A[10];

A[0] = 42;
A[1] = 100;
A[2] = A[0] + 5 * A[1];
A[3] = -1;
A[4] = 44;
A[5] = 55;
/* ... */
A[9] = 99;
```

	A
0	42
1	100
2	542
3	-1
4	44
5	55
6	0
7	0
8	0
9	99

EECS10: Computational Methods in ECE, Lecture 16

(c) 2006 R. Doemer

6

## Arrays

- Array Indexing
  - for loops are often very helpful
    - `for(i=0; i<N; i++)`  
`{...A[i]...}`
- Example:
 

```
int A[10];
int i;

for(i=0; i<10; i++)
{ A[i] = i*10 + i;
}
for(i=0; i<10; i++)
{ printf("%d, ", A[i]);
}
```

A	
0	0
1	11
2	22
3	33
4	44
5	55
6	66
7	77
8	88
9	99

0, 11, 22, 33, 44, 55, 66, 77, 88, 99,

EECS10: Computational Methods in ECE, Lecture 16 (c) 2006 R. Doemer 7

## Arrays

- Array Indexing
  - Array indices are *not* checked by the compiler!
  - Accessing an array with an *index out of range* results in undefined behavior!
- Example:
 

```
int A[10];
int i;

A[-1] = 42; /* INVALID ACCESS! */

for(i=0; i<=10; i++)
/* INVALID LOOP RANGE! */
{ printf("%d, ", A[i]);
}
```

0	0
1	0
2	0
3	0
4	0
5	0
6	0
7	0
8	0
9	0

EECS10: Computational Methods in ECE, Lecture 16 (c) 2006 R. Doemer 8

## Arrays

- Array Initialization
  - Static initialization at time of array definition
  - Initial elements listed in { }
- Example:

```
int A[10] = { 42, 100,
             310, 44,
             55, 0,
             3, 4,
             0, 99};
```

	A
0	42
1	100
2	310
3	44
4	55
5	0
6	3
7	4
8	0
9	99

EECS10: Computational Methods in ECE, Lecture 16

(c) 2006 R. Doemer

9

## Arrays

- Array Initialization
  - Static initialization at time of array definition
  - Initial elements listed in { }
- Example:

```
int A[ ] = { 42, 100,
            310, 44,
            55, 0,
            3, 4,
            0, 99};
```

- With given initializer list, array size may be omitted
  - automatically determined

	A
0	42
1	100
2	310
3	44
4	55
5	0
6	3
7	4
8	0
9	99

EECS10: Computational Methods in ECE, Lecture 16

(c) 2006 R. Doemer

10

## Arrays

- Array Initialization
  - Static initialization at time of array definition
  - Initial elements listed in { }
- Example:
 

```
int A[10] = { 1, 2, 3};
```
- With given initializer list *and* array size, unlisted elements are zero-initialized
  - array is filled up with zeros

	A
0	1
1	2
2	3
3	0
4	0
5	0
6	0
7	0
8	0
9	0

EECS10: Computational Methods in ECE, Lecture 16

(c) 2006 R. Doemer

11

## Arrays

- Multi-dimensional Arrays
  - Array of an array...
- Example:

```
int M[3][2] = {{1, 2},
               {3, 4},
               {5, 6}};

int i, j;

for(i=0; i<3; i++)
{ for(j=0; j<2; j++)
  { printf("%d ",
           M[i][j]);
  }
  printf("\n");
}
```

M	0	1
0	1	2
1	3	4
2	5	6

1	2
3	4
5	6

EECS10: Computational Methods in ECE, Lecture 16

(c) 2006 R. Doemer

12

## Arrays

- Operator associativity and precedence
  - parentheses, array access      ( ), [ ]      left to right
  - unary operators                    +, -, !, ++, --    right to left
  - type casting                        ( *typename* )    right to left
  - multiplication, division, modulo    \*, /, %      left to right
  - addition, subtraction                +, -      left to right
  - shift left, shift right                <<, >>      left to right
  - relational operators                 <, <=, >=, >    left to right
  - equality                                ==, !=      left to right
  - logical and                          &&          left to right
  - logical or                             ||          left to right
  - conditional operator                 ?:          left to right
  - assignment operators                =, +=, \*=, etc.    right to left
  - comma operator                        ,          left to right

EECS10: Computational Methods in ECE, Lecture 16

(c) 2006 R. Doemer

13

## Arrays

- Program example: `Histogram.c`
- Desired output:

```
% Histogram
Please enter data value 1: 11
Please enter data value 2: 22
Please enter data value 3: 3
Please enter data value 4: 33
[...]
1: 11 *****
2: 22 *****
3: 3 ****
4: 33 *****
[...]
```

EECS10: Computational Methods in ECE, Lecture 16

(c) 2006 R. Doemer

14

## Arrays

- Program example: `Histogram.c` (part 1/3)

```

/* Histogram.c: print a histogram of data values */
/* author: Rainer Doemer */
/* modifications: */
/* 11/02/04 RD initial version */

#include <stdio.h>

/* constants */
#define NUM_ROWS 10

/* main function */
int main(void)
{
    /* variable definitions */
    int Data[NUM_ROWS];
    int i, j, max;
    double scale;

    ...

```

EECS10: Computational Methods in ECE, Lecture 16

(c) 2006 R. Doemer

15

## Arrays

- Program example: `Histogram.c` (part 2/3)

```

...
/* input section */
for(i = 0; i < NUM_ROWS; i++)
{ printf("Please enter data value %2d: ", i+1);
  scanf("%d", &Data[i]);
} /* rof */

/* computation section */
max = 0;
for(i = 0; i < NUM_ROWS; i++)
{ if (Data[i] > max)
  { max = Data[i];
  } /* fi */
} /* rof */
scale = 70.0 / max;

...

```

EECS10: Computational Methods in ECE, Lecture 16

(c) 2006 R. Doemer

16

## Arrays

- Program example: `Histogram.c` (part 3/3)

```

...
/* output section */
for(i = 0; i < NUM_ROWS; i++)
{ printf("%2d: %5d ", i+1, Data[i]);
  for(j = 0; j < Data[i]*scale; j++)
  { printf("*");
    } /* rof */
  printf("\n");
} /* rof */

/* exit */
return 0;
} /* end of main */

/* EOF */

```

EECS10: Computational Methods in ECE, Lecture 16

(c) 2006 R. Doemer

17

## Arrays

- Example session: `Histogram.c`

```

% vi Histogram.c
% gcc Histogram.c -o Histogram -Wall -ansi
% Histogram
Please enter data value 1: 11
Please enter data value 2: 22
Please enter data value 3: 3
Please enter data value 4: 33
Please enter data value 5: 44
Please enter data value 6: 55
Please enter data value 7: 66
Please enter data value 8: 33
Please enter data value 9: 22
Please enter data value 10: 22
1: 11 *****
2: 22 *****
3: 3 ****
4: 33 *****
5: 44 *****
6: 55 *****
7: 66 *****
8: 33 *****
9: 22 *****
10: 22 *****
%

```
