File Processing

- Introduction
 - Up to now, all data processed is available only during program run time
 - At program completion, all data is lost
 - *Persistent data* is stored even after a program exits
 - Persistent data is stored in files...
 - ... on the harddisk
 - ... on a removable disk (CD, memory stick, ...)
 - ... on a tape, ...
 - Input and output from/to files is organized as *I/O streams*

4

File Processing

- I/O Streams
 - Standard I/O streams (opened by the system)
 - `stdin` standard input stream (i.e. `scanf()`)
 - `stdout` standard output stream (i.e. `printf()`)
 - `stderr` standard error stream (i.e. `fprintf()`)
 - File I/O streams (explicitly opened by a program)
 - Open a file `fopen()`
 - Write data to a file `fprintf()`, `fputs()`, etc.
 - Read data from a file `fscanf()`, `fgets()`, etc.
 - Close a file `fclose()`
 - In C, all I/O functions are ...
 - ... declared in header file `stdio.h`
 - ... implemented in the standard C library
