

## Lecture 6.3: Overview

- Functions
  - Math library functions
    - Example `Function.c`
  - Standard library functions
    - Example `Dice.c`

## Math Library Functions

- C standard math library
  - standard library supplied with every C compiler
  - predefined mathematical functions
    - e.g. `cos(x)`, `sqrt(x)`, etc.
- Math library header file
  - contains math function declarations
  - `#include <math.h>`
- Math library linker file
  - contains math function definitions (pre-compiled)
    - library file `libm.a`
  - compiler needs to *link* against the math library
  - use option `-llibraryname`
  - Example: `gcc MathProgram.c -o MathProgram -lm`

## Math Library Functions

- Functions declared in `math.h` (part 1/2)

- <code>double sqrt(double x);</code>	$\sqrt{x}$
- <code>double pow(double x, double y);</code>	$x^y$
- <code>double exp(double x);</code>	$e^x$
- <code>double log(double x);</code>	$\log(x)$
- <code>double log10(double x);</code>	$\log_{10}(x)$
- <code>double ceil(double x);</code>	$\lceil x \rceil$
- <code>double floor(double x);</code>	$\lfloor x \rfloor$
- <code>double fabs(double x);</code>	$ x $
- <code>double fmod(double x, double y);</code>	$x \bmod y$

## Math Library Functions

- Functions declared in `math.h` (part 2/2)

- <code>double cos(double x);</code>	$\cos(x)$
- <code>double sin(double x);</code>	$\sin(x)$
- <code>double tan(double x);</code>	$\tan(x)$
- <code>double acos(double x);</code>	$\arccos(x)$
- <code>double asin(double x);</code>	$\arcsin(x)$
- <code>double atan(double x);</code>	$\arctan(x)$
- <code>double cosh(double x);</code>	$\cosh(x)$
- <code>double sinh(double x);</code>	$\sinh(x)$
- <code>double tanh(double x);</code>	$\tanh(x)$

## Math Library Functions

- Program example: **Function.c** (part 1/3)

```
/* Function.c: compute a math function table */
/*
 * author: Rainer Doemer
 */
/*
 * modifications:
 */
/* 10/28/04 RD initial version */

#include <stdio.h>
#include <math.h>

/* function definition */

double f(double x)
{
    return cos(x);
} /* end of f */

...
```

## Math Library Functions

- Program example: **Function.c** (part 2/3)

```
...
/* main function */

int main(void)
{
    /* variable definitions */
    double hi, lo, step;
    double x, y;

    /* input section */
    printf("Please enter the lower bound: ");
    scanf("%lf", &lo);
    printf("Please enter the upper bound: ");
    scanf("%lf", &hi);
    printf("Please enter the step size:   ");
    scanf("%lf", &step);

    ...
}
```

## Math Library Functions

- Program example: **Function.c** (part 3/3)

```
...
/* computation and output section */
for(x = lo; x <= hi; x += step)
{
    y = f(x);
    printf("f(%10g) = %10g\n", x, y);
} /* rof */

/* exit */
return 0;
} /* end of main */

/* EOF */
```

## Math Library Functions

- Example session: **Function.c**

```
% vi Function.c
% gcc Function.c -o Function -Wall -ansi -lm
% Function
Please enter the lower bound: -0.5
Please enter the upper bound: 1.0
Please enter the step size: .1
f( -0.5) =  0.877583
f( -0.4) =  0.921061
f( -0.3) =  0.955336
f( -0.2) =  0.980067
f( -0.1) =  0.995004
f(-2.77556e-17) =          1
f( 0.1) =  0.995004
f( 0.2) =  0.980067
f( 0.3) =  0.955336
f( 0.4) =  0.921061
f( 0.5) =  0.877583
f( 0.6) =  0.825336
f( 0.7) =  0.764842
f( 0.8) =  0.696707
f( 0.9) =  0.62161
f( 1) =  0.540302
%
EE%
```

## Standard Library Functions

- Standard C library
  - standard library supplied with every C compiler
  - predefined standard functions
    - e.g. `printf()`, `scanf()`, etc.
- C library header files
  - input/output function declarations `#include <stdio.h>`
  - standard function declarations `#include <stdlib.h>`
  - time function declarations `#include <time.h>`
  - etc.
- C library linker file
  - contains standard function definitions (pre-compiled)
    - library file `libc.a`
  - compiler *automatically links* against the standard library (no need to supply extra options)

## Standard Library Functions

- Functions declared in `stdlib.h` (partial list)
  - `int abs(int x);`
  - `long int labs(long int x);`
    - return the absolute value of a (long) integer `x`
  - `int rand(void);`
    - return a random value in the range 0 – `RAND_MAX`
    - `RAND_MAX` is a constant integer (e.g. 32767)
  - `void srand(unsigned int seed);`
    - initialize the random number generator with value `seed`
  - `void exit(int result);`
    - exit the program with return value `result`
  - `void abort(void);`
    - abort the program (with an error result)

## Standard Library Functions

- Random number generation
  - Standard library provides *pseudo* random number generator
    - `int rand(void);`
  - Pseudo random numbers are a sequence of values seemingly random in the range 0 – `RAND_MAX`
    - Computer is a *deterministic* machine
    - Sequence will always be the same
  - Start of sequence is determined by *seed* value
    - `void srand(unsigned int seed);`
  - Trick: Initialize random sequence with current time
    - header file `time.h` declares function `unsigned int time()`
    - `time(0)` returns number of seconds since Jan 1, 1970
    - at beginning of program, use:  
`srand(time(0));`

## Standard Library Functions

- Program example: `Dice.c` (part 1/4)

```
/* Dice.c: roll the dice */  
/* author: Rainer Doemer */  
/* modifications: */  
/* 10/28/04 RD initial version */  
  
#include <stdio.h>  
#include <stdlib.h>  
#include <time.h>  
  
/* function definition */  
int roll(void)  
{  
    int r;  
  
    r = rand() % 6 + 1;  
    /* printf("Rolled a %d.\n", r); */  
    return r;  
} /* end of roll */  
...
```

## Standard Library Functions

- Program example: **Dice.c** (part 2/4)

```
...
/* main function */

int main(void)
{
    /* variable definitions */
    int i, n;
    int count1 = 0, count2 = 0, count3 = 0,
        count4 = 0, count5 = 0, count6 = 0;

    /* random number generator initialization */
    srand(time(0));

    /* input section */
    printf("Roll the dice: How many times? ");
    scanf("%d", &n);

    ...
}
```

## Standard Library Functions

- Program example: **Dice.c** (part 3/4)

```
... /* computation section */
for(i = 0; i < n; i++)
{
    switch(roll())
    {
        case 1:
            { count1++; break; }
        case 2:
            { count2++; break; }
        case 3:
            { count3++; break; }
        case 4:
            { count4++; break; }
        case 5:
            { count5++; break; }
        case 6:
            { count6++; break; }
        default:
            { printf("INVALID ROLL!");
                exit(10);
            } /* hctiws */
    } /* rof */
}
...
}
```

## Standard Library Functions

- Program example: **Dice.c** (part 4/4)

```
...
/* output section */
printf("Rolled a 1 %d times.\n", count1);
printf("Rolled a 2 %d times.\n", count2);
printf("Rolled a 3 %d times.\n", count3);
printf("Rolled a 4 %d times.\n", count4);
printf("Rolled a 5 %d times.\n", count5);
printf("Rolled a 6 %d times.\n", count6);

/* exit */
return 0;
} /* end of main */

/* EOF */
```

## Standard Library Functions

- Example session: **Dice.c**

```
% vi Dice.c
% gcc Dice.c -o Dice -Wall -ansi
% Dice
Roll the dice: How many times? 6000
Rolled a 1  963 times.
Rolled a 2  995 times.
Rolled a 3  1038 times.
Rolled a 4  1024 times.
Rolled a 5  984 times.
Rolled a 6  996 times.
% Dice
Roll the dice: How many times? 6000
Rolled a 1  977 times.
Rolled a 2  1043 times.
Rolled a 3  1012 times.
Rolled a 4  1001 times.
Rolled a 5  963 times.
Rolled a 6  1004 times.
%
```
