EECS 10: Computational Methods in Electrical and Computer Engineering
Lecture 1

Rainer Dömer

doemer@uci.edu

The Henry Samueli School of Engineering
Electrical Engineering and Computer Science
University of California, Irvine

Lecture 1.1: Overview

- Introduction
  - Course overview
- Introduction to Computers
  - What is a computer?
  - What is programming?

- Course administration
  - Course web pages

Introduction

- Course Contents
  - Introduction to computers
  - Introduction to structured programming
    - C, a high-level structured programming language
  - Binary data representation
  - Introduction to algorithm efficiency
  - Solving engineering problems
    - Applications of structured programming
  - Hands-on experience
    - Laboratory and discussion sessions

Introduction to Computers

- What is a computer?
  - Digital device capable of executing programs
    - performing computations
    - making logical decisions
- What is a program?
  - Set of instructions which process data
    - input data   (e.g. from keyboard, mouse, disk)
    - output data   (e.g. to monitor, printer, disk)
- What is programming?
  - Creation of computer programs
    by use of a programming language

Introduction to Programming

- Categories of programming languages
  - Machine languages   (stream of 1's and 0's)
  - Assembly languages   (low-level CPU instructions)
  - High-level languages   (high-level instructions)
- Translation of high-level languages
  - Interpreter   (translation for each instruction)
  - Compiler   (translation once for all code)
  - Hybrid   (combination of the above)
- Types of programming languages
  - Functional   (e.g. Lisp)
  - Structured   (e.g. Pascal, C, Ada)
  - Object-oriented   (e.g. C++, Java, Python)

EECS10: Computational Methods in ECE, Lecture 1   (c) 2017 R. Doemer   5

Course Administration

- Course web pages online at
  `http://eee.uci.edu/17y/18010/`
  - Instructor information
  - Course description and contents
  - Course policies and resources
  - Course schedule
  - Homework assignments
  - Course communication
    - Message board (announcements and technical discussion)
    - Email   (administrative issues)

EECS10: Computational Methods in ECE, Lecture 1   (c) 2017 R. Doemer   6

Lecture 1.2: Overview

- Getting started
  - Obtain your UCInetID
  - Obtain an account on the EECS servers
  - Log into the server

- Linux system environment
  - System commands
  - Text editing

Getting Started

- Log into the server
  - Use a terminal with SSH protocol (secure shell)
  - Connect to the EECS Linux server
    - `crystalcove.eecs.uci.edu`
    - `zuma.eecs.uci.edu`
  - Authorize yourself with your UCInetID credentials

- Work in the Linux system environment
  - Linux shell prints command prompt, awaiting input
  - Type in system commands
    `echo`, `date`, `ls`, `cat`, `man`, `more`,
    `pwd`, `mkdir`, `cd`, `cp`, `mv`, `rm`, `rmdir`
  - Refer to manual pages for help on commands

Linux System Environment

- Linux system commands
    - **echo**   print a message
    - **date**   print the current date and time
    - **ls**   list the contents of the current directory
    - **cat**   list the contents of files
    - **more**   list the contents of files page by page
    - **pwd**   print the path to the current working directory
    - **mkdir**   create a new directory
    - **cd**   change the current directory
    - **cp**   copy a file
    - **mv**   rename and/or move a file
    - **rm**   remove (delete) a file
    - **rmdir**   remove (delete) a directory
    - **man**   view manual pages for system commands

EECS10: Computational Methods in ECE, Lecture 1   (c) 2017 R. Doemer   9

# Linux System Environment

- Text editing
    - **vi**   standard Unix editor
    - **vim**   vi-improved (supports syntax highlighting)
    - **pico**   easy-to-use text editor
    - **emacs** very powerful editor
    - many others...
- Pick one editor and
  make yourself comfortable with it!

EECS10: Computational Methods in ECE, Lecture 1   (c) 2017 R. Doemer   10

Linux System Environment

- Example session (1/4):

```
login as: doemer
Password:
Last login: Mon Oct  1 08:20:09 2007 from beta.eecs.uci.e
...
If this system is busy, consider a less loaded one below:
vivian.eecs.uci  up 30 days, 18:00,   load average: 0.00, 0.00, 0.01
malibu.eecs.uci  up 2826 days, 21:06, load average: 0.00, 0.00, 0.01
newport.eecs.uc  up 23 days, 23:29,   load average: 0.00, 0.00, 0.02
east.eecs.uci.e  up 12 days,  4:56,   load average: 1.46, 1.41, 1.68
% date
Mon Oct  1 08:24:47 PDT 2007
% echo "Hello EECS10!"
Hello EECS10!
% ls
eecs10/           Mail/               tmp/
% pwd
/users/faculty/doemer
% mkdir homework
% ls
eecs10/           homework/           Mail/               tmp/
...
```

EECS10: Computational Methods in ECE, Lecture 1   (c) 2017 R. Doemer   11

Linux System Environment

- Example session (2/4):

```
...
% cd homework
% pwd
/users/faculty/doemer/homework
% ls
% mkdir hw1
% ls
hw1/
% cd hw1
% ls
% vi program.c
% ls
program.c
% ls -l
total 2
-rw-------   1 doemer   smmsp        51 Oct  1 08:32 program.c
% more program.c
This is my new program file.
I don't know C yet...
...
```

EECS10: Computational Methods in ECE, Lecture 1   (c) 2017 R. Doemer   12

Linux System Environment

- Example session (3/4):

```
...
% cp program.c mybackup.c
% ls
mybackup.c   program.c
% ls -l
-rw-------   1 doemer    smmsp        51 Oct  1 08:34 mybackup.c
-rw-------   1 doemer    smmsp        51 Oct  1 08:32 program.c
% cd ..
% pwd
/users/faculty/doemer/homework
% ls
hw1/
% ~eecs10/bin/turnin.sh
=======================================
EECS 10 Summer 2017:
Assignment "hw1" submission for doemer
Due date: Mon Jul  3 11:00:00 2017
=======================================
...
```

EECS10: Computational Methods in ECE, Lecture 1   (c) 2017 R. Doemer   13

Linux System Environment

- Example session (4/4):

```
...
Submit program.c [yes, no]? y
Cannot read file program.c
Submit mybackup.c [yes, no]? n
=======================================
   Summary:
=======================================
You just submitted file(s):
    program.c
You have not submitted file(s):
    mybackup.c
% ~eecs10/bin/listfiles.py
=======================================
EECS 10 Summer 2017: "hw1" listing for doemer
=======================================
Files submitted for assignment "hw1":
program.c
% logout
```

EECS10: Computational Methods in ECE, Lecture 1   (c) 2017 R. Doemer   14

Lecture 1.3: Overview

- Introduction to Programming in C
  - History of C
  - Introduction to C
- Our first C Program
  - Example **HelloWorld.c**
  - Structure of a C program
  - **printf()** function
  - Program compilation and execution
  - String constants

EECS10: Computational Methods in ECE, Lecture 1   (c) 2017 R. Doemer   15

Introduction to Programming

- Categories of programming languages
  - Machine languages   (stream of 1's and 0's)
  - Assembly languages   (low-level CPU instructions)
  - High-level languages   (high-level instructions)
- Translation of high-level languages
  - Interpreter   (translation for each instruction)
  - Compiler   (translation once for all code)
  - Hybrid   (combination of the above)
- Types of programming languages
  - Functional   (e.g. Lisp)
  - Structured   (e.g. Pascal, C, **Ada)**
  - Object-oriented   (e.g. C++, Java, Python)

EECS10: Computational Methods in ECE, Lecture 1   (c) 2017 R. Doemer   16

History of C

- Evolved from BCPL and B
  - in the 60's and 70's
- Created in 1972 by Dennis Ritchie (Bell Labs)
  - first implementation on DEC PDP-11
  - added concept of *typing* (and other features)
  - development language of UNIX operating system
- "Traditional" C
  - 1978, *"The C Programming Language"*,
    by Brian W. Kernighan, Dennis M. Ritchie
  - ported to most platforms
- ANSI C
  - standardized in 1989 by ANSI and OSI
  - standard updated in 1999

EECS10: Computational Methods in ECE, Lecture 1   (c) 2017 R. Doemer   17

Introduction to C

- What is C?
  - Programming language
    - high-level
    - structured
    - compiled
  - Standard library
    - rich collection of existing functions
- Why C?
  - de-facto standard in software development
  - code is portable to many different platforms
  - supports structured and functional programming
  - easy transition to object-oriented programming
    - C++ / Java
  - freely available for most platforms

EECS10: Computational Methods in ECE, Lecture 1   (c) 2017 R. Doemer   18

Our first C Program

- Program example: `HelloWorld.c`

```
/* HelloWorld.c: our first C program   */
/*                                      */
/* author: Rainer Doemer               */
/*                                      */
/* modifications:                      */
/* 09/28/04 RD  initial version         */

#include <stdio.h>

/* main function */

int main(void)
{
    printf("Hello World!\n");
    return 0;
}

/* EOF */
```

EECS10: Computational Methods in ECE, Lecture 1   (c) 2017 R. Doemer   19

Our first C Program

- Program comments
  - start with `/*` and end with `*/`
  - are ignored by the compiler
  - should be used to
    - document the program code
    - structure the program code
    - enhance the readability

```
/* HelloWorld.c: our first C program */
/* author: Rainer Doemer            */
/* modifications:                   */
/* 09/28/04 RD  initial version      */
#include <stdio.h>
/* main function */
int main(void)
{
    printf("Hello World!\n");
    return 0;
}
/* EOF */
```

- `#include` preprocessor directive
  - inserts a header file into the code
- standard header file `<stdio.h>`
  - part of the C standard library
  - contains declarations of standard types and functions for data input and output (e.g. function `printf()`)

EECS10: Computational Methods in ECE, Lecture 1   (c) 2017 R. Doemer   20

Our first C Program

- **int main(void)**
  - main function of the C program
  - the program execution starts (and ends) here
  - **main** must return an integer (**int**) value to the operating system at the end of its execution
    - return value of 0 indicates successful completion
    - return value greater than 0 usually indicates an error condition
- function body
  - block of code (definitions and statements)
  - starts with an opening brace (**{**)
  - ends with a closing brace (**}**)
- **printf()** function
  - formatted output (to **stdout**)
- **return** statement
  - ends a function and returns its argument as result

```
...
/* main function */
int main(void)
{
    printf("Hello World!\n");
    return 0;
}
/* EOF */
```

EECS10: Computational Methods in ECE, Lecture 1   (c) 2017 R. Doemer   21

Our first C Program

- Program compilation
  - compiler translates the code into an executable program
  - **gcc HelloWorld.c**
  - compiler reads file **HelloWorld.c** and creates file **a.out**
  - options may be specified to direct the compilation
    - **-o HelloWorld**   specifies output file name
    - **–ansi –Wall**   specifies ANSI code with all warnings
- Program execution
  - use the generated executable as command
  - **HelloWorld**
  - the operating system loads the program (loader),
    then executes its instructions (program execution),
    and finally resumes when the program has terminated

EECS10: Computational Methods in ECE, Lecture 1   (c) 2017 R. Doemer   22

Our first C Program

- Example session: HelloWorld.c

```
% mkdir HelloWorld
% cd HelloWorld
% ls
% vi HelloWorld.c
% ls
HelloWorld.c
% ls -l
-rw-r--r--   1 doemer    faculty      263 Sep 28 22:11 HelloWorld.c
% gcc HelloWorld.c
% ls -l
-rw-r--r--   1 doemer    faculty      263 Sep 28 22:11 HelloWorld.c
-rwxr-xr-x   1 doemer    faculty     6352 Sep 28 22:12 a.out*
% a.out
Hello World!
% gcc -Wall -ansi HelloWorld.c -o HelloWorld
% ls -l
-rwxr-xr-x   1 doemer    faculty     6356 Sep 28 22:17 HelloWorld*
-rw-r--r--   1 doemer    faculty      263 Sep 28 22:17 HelloWorld.c
-rwxr-xr-x   1 doemer    faculty     6352 Sep 28 22:12 a.out*
% HelloWorld
Hello World!
```

EECS10: Computational Methods in ECE, Lecture 1   (c) 2017 R. Doemer   23

Our first C Program

- Character string constants: "Strings"
  - start and end with a double quote character (**"**)
  - may not extend over a single line
  - subsequent string constants are combined
  - text formatting using escape sequences
    - **\n**   new line
    - **\t**   horizontal tab
    - **\r**   carriage return
    - **\b**   back space
    - **\a**   alert / bell
    - ****   backslash character
    - **\"**   double quote character
- Experiments with the **HelloWorld** program...

EECS10: Computational Methods in ECE, Lecture 1   (c) 2017 R. Doemer   24
