EECS 10: Computational Methods in Electrical and Computer Engineering Lecture 5

Rainer Dömer

doemer@uci.edu

The Henry Samueli School of Engineering Electrical Engineering and Computer Science University of California, Irvine

Lecture 5.1: Overview

- · Think before you program!
- · Structured Programming
 - Control flow charts
 - Sequential statements
 - Conditional statements
 - Repetition statements
 - while loop
 - do-while loop
 - for loop
- Program Development
 - Example Interest.c

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

2

Programming == Thinking

- Programming ...
 - ... is not a mechanic procedure!
 - ... requires thinking!
- Program ...
 - ... writing requires an intelligent human being!
 - ... execution can be performed by a dumb machine.
- General programming steps:
 - 1. Understand the problem
 - 2. Define the input and output data
 - 3. Develop the algorithm (and specify it in pseudo code)
 - 4. Define the control flow (e.g. use control flow charts)
 - 5. Write the program in programming language
 - 6. Compile, test and debug the program

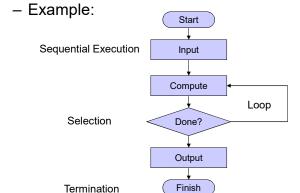

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

3

Structured Programming

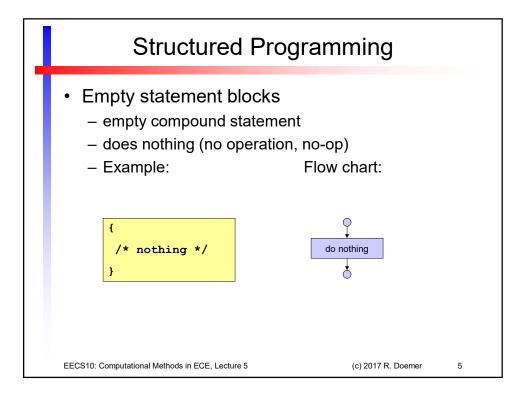

- · Control flow charts
 - Graphical representation of program control flow

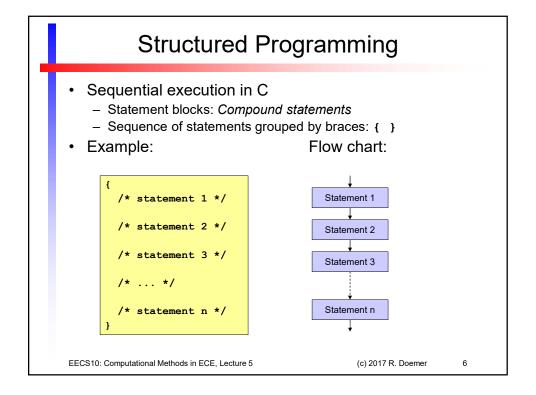

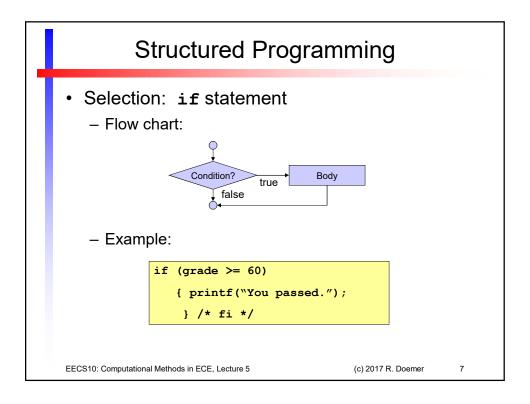

EECS10: Computational Methods in ECE, Lecture 5

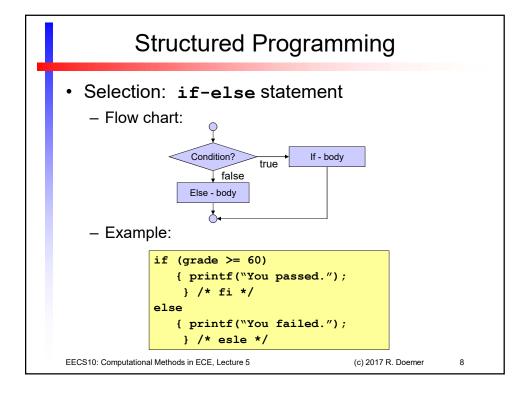

(c) 2017 R. Doemer

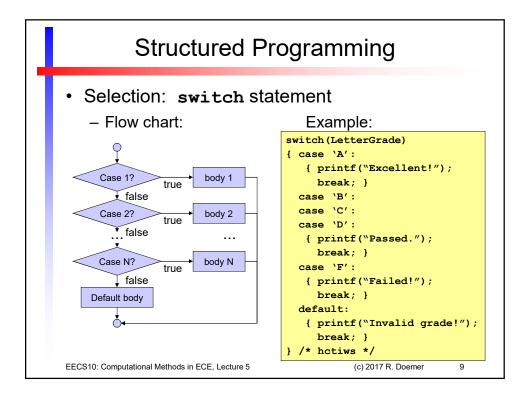

4

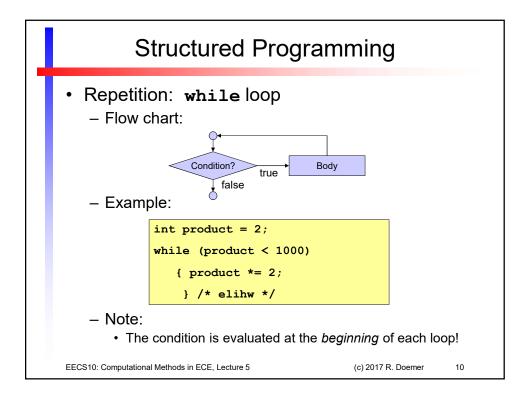

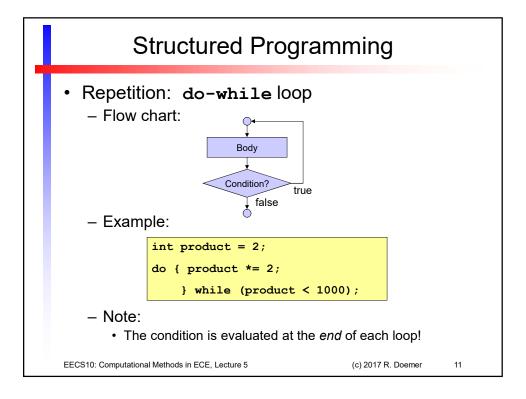

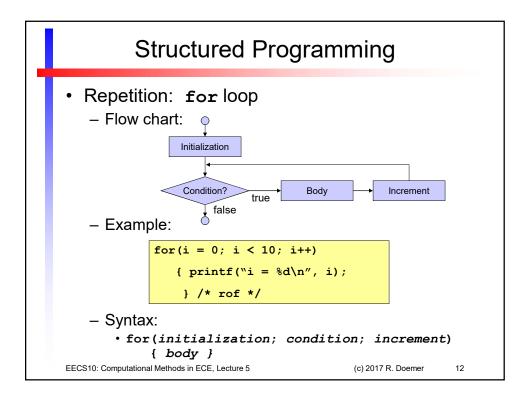

- Compound interest: Interest.c
- Assignment:
 - Write a program that calculates the interest accumulated in a savings account. Given an initial deposit amount and an annual percentage rate (APR), compute the yearly interest earned and the resulting balance, for a period of ten years.
 - For example, for \$1000 in savings at 4.5% APR, the annual interest should be tabulated as follows:

```
Interest for year 1 is $ 45.00, total balance is $ 1045.00. Interest for year 2 is $ 47.02, total balance is $ 1092.03. Interest for year 3 is $ 49.14, total balance is $ 1141.17.
```

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

13

Program Development Example

- Compound interest: Interest.c
- Assignment:
 - Write a program that calculates the interest accumulated in a savings account. Given an initial deposit amount and an annual percentage rate (APR), compute the yearly interest earned and the resulting balance, for a period of ten years.
- Step 1: Understand the problem
 - What is given?
 - deposit amount, annual percentage rate
 - What is asked for?
 - · yearly interest, resulting balance
 - How do we compute what is asked for?
 - interest = amount * APR/100
 - balance = amount + interest

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

14

- · Step 1: Understand the problem
 - What is given?
 - · deposit amount, annual percentage rate
 - What is asked for?
 - · yearly interest, resulting balance
- > Step 2: Define the input and output data
 - Input:

Deposit amount: amount, floating point type
Annual percentage rate: rate, floating point type

- Output:

Current year: year, integral type
 Interest earned: interest, floating point type
 Resulting balance: balance, floating point type

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

15

Program Development Example

- Step 2: Define the input and output data
 - Deposit amount: amount, floating point type
 Annual percentage rate: rate, floating point type
 Current year: year, integral type
 Interest earned: interest, floating point type
 Resulting balance: balance, floating point type
- Step 3: Develop the algorithm (in pseudo code)
 - First, input amount and rate
 - For the current year, compute interest on the amount
 - Next, compute new balance at the end of the year
 - Then, print year, interest and balance in tabular format
 - Finally, set the amount to the new balance
 - Repeat the previous 4 steps for 10 years
 - Done!

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

16

- Step 3: Develop the algorithm (in pseudo code)
 - First, input amount and rate
 - For the current year, compute interest on the amount
 - Next, compute new balance at the end of the year
 - Then, print year, interest and balance in tabular format
 - Finally, set the amount to the new balance
 - Repeat the previous 4 steps for 10 years
- Step 4: Define the control flow
 - First, input amount and rate
 - Repeat for 10 years:
 - Compute interest on the amount
 - · Compute new balance at the end of the year
 - Print year, interest and balance in tabular format
 - · Set the amount to the new balance
 - Done!

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

17

Program Development Example

- Step 4: Define the control flow
 - First, input amount and rate
 - Repeat for 10 years:
 - Compute interest on the amount
 - · Compute new balance at the end of the year
 - Print year, interest and balance in tabular format
 - · Set the amount to the new balance
- Step 5: Write the program in programming language

```
double amount;
double rate;
double interest;

double balance;

printf("Please enter the initial amount in $: ");
scanf("%lf", &amount);

printf("Please enter the interest rate in %% : ");
scanf("%lf", &rate);
etc.
```

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

18

Example Program Compound interest: Interest.c (part 1/2) /* Interest.c: compound interest on savings account /* author: Rainer Doemer */ /* modifications: /* 10/18/06 RD distinguish amount and balance /* 10/19/04 RD initial version #include <stdio.h> /* main function */ int main(void) /* variable definitions */ double amount, balance, rate, interest; year; /* input section */ printf("Please enter the initial amount in \$: "); scanf("%lf", &amount); printf("Please enter the interest rate in %% : "); scanf("%lf", &rate); EECS TO: Computational Methods in ECE, Lecture 5 (C) 2017 R. Doemer

Example Program Compound interest: Interest.c (part 2/2) /* computation and output section */ for(year = 1; year <= 10; year++)</pre> { interest = amount * (rate/100.0); balance = amount + interest; printf("Interest for year %2d is \$%8.2f," " total balance is \$%8.2f.\n", year, interest, balance); amount = balance; } /* rof */ /* exit */ return 0; } /* end of main */ /* EOF */ EECS10: Computational Methods in ECE, Lecture 5 (c) 2017 R. Doemer

- Step 5: Write the program in programming language
- Step 6: Compile, test (and debug) the program

```
% vi Interest.c
% gcc Interest.c -o Interest -Wall -ansi
% Interest
Please enter the initial amount in $: 1500
Please enter the interest rate in %: 1.5
Interest for year 1 is $ 22.50, total balance is $ 1522.50.
Interest for year 2 is $ 22.84, total balance is $ 1545.34.
Interest for year 3 is $ 23.18, total balance is $ 1568.52.
Interest for year 4 is $ 23.53, total balance is $ 1592.05.
Interest for year 5 is $ 23.88, total balance is $ 1615.93.
Interest for year 6 is $ 24.24, total balance is $ 1640.16.
Interest for year 7 is $ 24.60, total balance is $ 1664.77.
Interest for year 8 is $ 24.97, total balance is $ 1689.74.
Interest for year 9 is $ 25.35, total balance is $ 1715.08.
Interest for year 10 is $ 25.73, total balance is $ 1740.81.
```

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

21

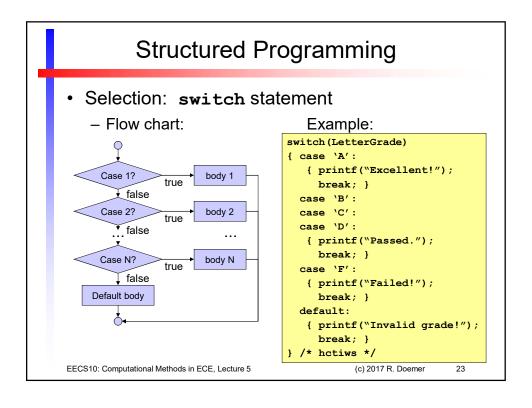

Lecture 5.2: Overview

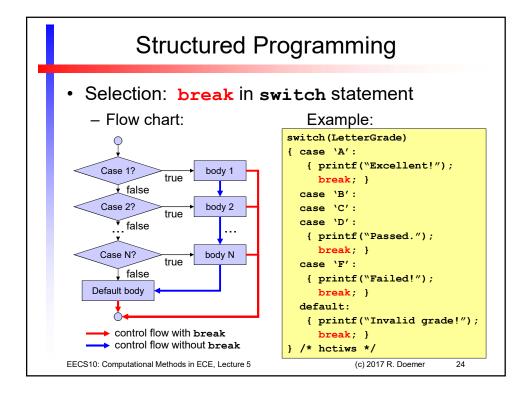

- · Structured Programming
 - Structured jump statements
 - break statement in switch statement
 - · break and continue in while loop
 - break and continue in do-while loop
 - · break and continue in for loop
- · Arbitrary jump statements
 - goto statement
- Debugging
 - Source-level debugger gdb
 - Example Interest2.c

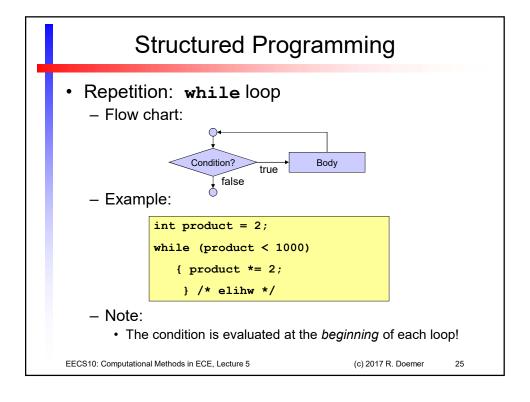

EECS10: Computational Methods in ECE, Lecture 5

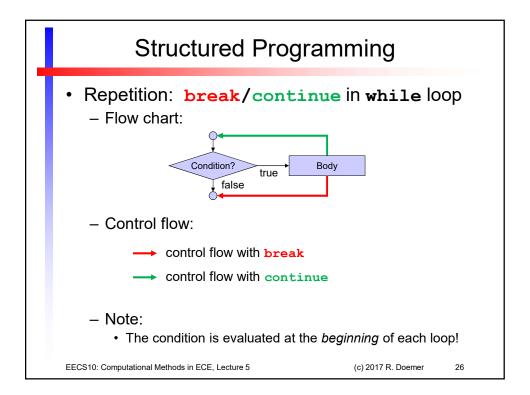

(c) 2017 R. Doemer

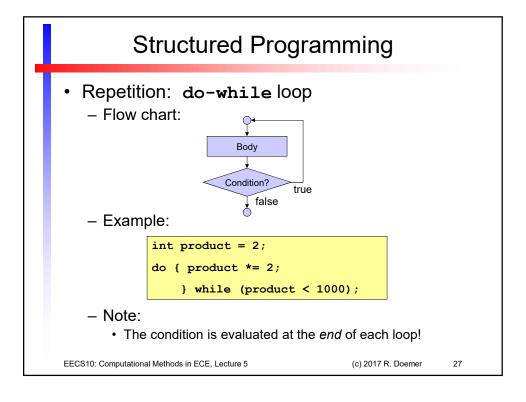

22

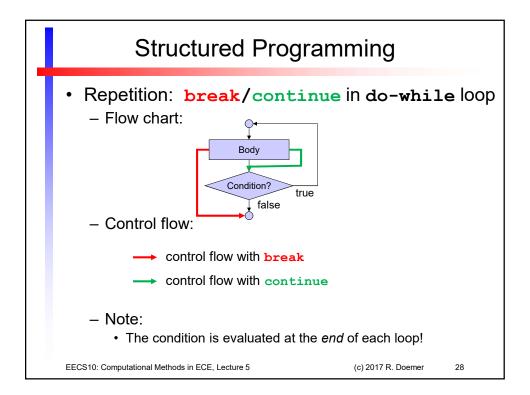

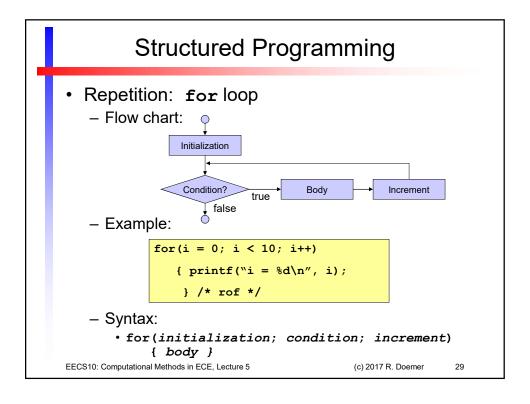

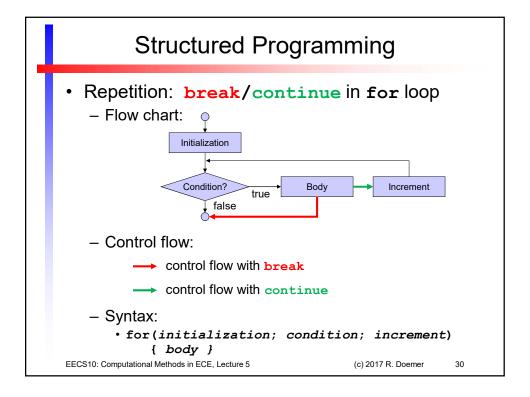

Arbitrary Control Flow

- · Arbitrary jumps: goto statement
 - goto statement jumps to the specified *labeled* statement (within the same function)

 - Warning:
 - goto statement allows un-structured programming!
 - goto statement should be avoided whenever possible!

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

31

Debugging

- Source-level Debugger gdb
 - Debugger features
 - run the program under debugger control
 - · follow the control flow of the program during execution
 - · set breakpoints to stop execution at specified statements
 - · inspect (and adjust) the values of variables
 - find the point in the program where the "crash" happens
 - Preparation:

compile your program with debugging support on

 Option -g tells compiler to add debugging information (symbol tables) to the generated executable file

```
>gcc Program.c -o Program -Wall -ansi -g
>gdb Program
```

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

32

Debugging

- Source-level Debugger gdb
 - Basic **qdb** commands
 - run
 - starts the execution of the program in the debugger
 - break function_name (Or line_number)
 - inserts a breakpoint; program execution will stop at the breakpoint
 - cont
 - continues the execution of the program in the debugger
 - list from_line_number, to_line_number
 - lists the current or specified range of line_numbers
 - print variable name
 - prints the current value of the variable variable name
 - next
 - executes the next statement (one statement at a time)
 - quit
 - exits the debugger (and terminates the program)
 - help
 - provides helpful details on debugger commands

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

33

Debugging Example

Compound interest: Interest2.c (part 1/2)

```
/* Interest2.c: compound interest on savings account
   /* author: Rainer Doemer
   /* modifications:
    /* 10/23/05 RD version to demonstrate debugging
   /* 10/19/04 RD initial version
   #include <stdio.h>
   /* main function */
   int main (void)
      /* variable definitions */
      double amount, balance, rate, interest;
             year;
      /* input section */
      printf("Please enter the initial amount in $:\n");
      scanf("%lf", &amount);
      printf("Please enter the interest rate in %%:\n");
      scanf("%lf", &rate);
EECS
```

Compound interest: Interest2.c (part 2/2)

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

35

Debugging Example

• Example session: Interest2.c (part 1/6)

```
% vi Interest2.c
    gcc Interest2.c -o Interest2 -g -Wall -ansi
   % Interest2
   Please enter the initial amount in $:
  Please enter the interest rate in %:
  Interest for year 1 is $ 15.00.
   The new balance is
                           $ 1015.00.
  Interest for year 2 is $ 15.22.
                          $ 1030.22.
  The new balance is
  Interest for year 10 is $ 17.15.
   The new balance is
                          $ 1160.54.

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

41

Lecture 5.3: Overview

- Functions
 - Introduction to function concepts
 - · Function declaration
 - · Function definition
 - Function call
 - Simple functions
 - Example Square.c
 - Hierarchy of functions
 - Example Cylinder.c

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

42

- · Introduction to Functions
 - Important programming concepts
 - · Hierarchy
 - Encapsulation
 - · Information hiding
 - · Divide and conquer
 - Software reuse
 - · Don't re-invent the wheel!
 - Program composition
 - C program = Set of functions
 - starting point: function named main
 - Libraries = Set of functions
 - predefined functions (typically written by somebody else)

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

43

Functions

- C programming language distinguishes 3 constructs around functions
 - Function declaration
 - · declaration of function name, parameters, and return type
 - Function definition
 - · extension of a function declaration with a function body
 - · definition of the function behavior
 - Function call
 - · invocation of a function

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

44

- Function Declaration
 - aka. function prototype or function signature
 - declares
 - · function name
 - · function parameters
 - · type of return value
- Example:

```
double Square(double p);
```

- function is named Square
- function takes one parameter p of type double
- function returns a value of type double

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

45

Functions

- Function Definition
 - extends a function declaration with a function body
 - defines the statements executed by the function
 - may use local variables for the computation
 - returns result value via return statement (if any)
- Example:

```
double Square(double p)
{
  double r;
  r = p * p;
  return r;
}
```

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

46

- Function Call
 - expression invoking a function
 - supplies arguments for formal parameters
 - invokes the function
 - result is the value returned by the function
- Example:

```
double a, b;
b = Square(a);
```

- function Square is called
- argument a is passed for parameter p (by value)
- value returned by the function is assigned to ъ

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

47

Functions

- · C programming language distinguishes 3 constructs
 - Function declaration
 - · declaration of function name, parameters, and return type
 - Function definition
 - · extension of a function declaration with a function body
 - · definition of the function behavior
 - Function call
 - · invocation of a function
- C program rules
 - A function must be declared before it can be called.
 - Multiple function declarations are allowed (if they match).
 - A function definition is an implicit function declaration.
 - A function must be defined exactly once in a program.
 - A function may be called any number of times.

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

48

```
Functions

    Program example: Square.c (part 1/2)

    /* Square.c: example demonstrating functions
    /* author: Rainer Doemer
                                                            */
    /* modifications:
                                                            */
    /* 10/27/08 RD \, renamed parameters and arguments /* 10/27/04 RD \, initial version
    #include <stdio.h>
    /* function declaration */
    double square(double p);
    /* function definition */
    double square(double p)
       double r;
        r = p * p;
        return r;
    } /* end of square */
EECS10: Computational Methods in ECE, Lecture 5
                                                   (c) 2017 R. Doemer
```

```
Functions
  Program example: Square.c (part 2/2)
    /* main function */
    int main(void)
    { /* variable definitions */
        double a, b;
        /* input section */
       printf("Please enter a value for the argument: ");
        scanf("%lf", &a);
        /* computation section */
        b = square(a);
        /* output section */
        printf("The square of %g is %g.\n", a, b);
        /* exit */
        return 0;
    } /* end of main */
    /* EOF */
EECS10: Computational Methods in ECE, Lecture 5
                                               (c) 2017 R. Doemer
```

• Example session: Square.c

```
% vi Square.c
% gcc Square.c -o Square -Wall -ansi
% Square
Please enter a value for the argument: 3
The square of 3 is 9.
% Square
Please enter a value for the argument: 5.5
The square of 5.5 is 30.25.
%
```

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

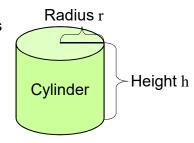

51

Functions

- · Hierarchy of Functions
 - functions call other functions
- Example:

Cylinder calculations

- · given radius and height
- · calculate surface and volume

- Circle constant $\pi = 3.14159265...$
- Circle perimeter $f_p(r) = 2 \times \pi \times r$
- Circle area $f_a(r) = \pi \times r^2$ Cylinder surface $f_s(r, h) = f_n(r) \times h + 2 \times f_a(r)$
- Cylinder volume $f_v(r, h) = f_a(r) \times h$

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

52

```
Functions

• Program example: Cylinder.c (part 2/3)

...
double CirclePerimeter(double r)
{
    return(2 * pi() * r);
}
double Surface(double r, double h)
{
    double side, lid;
    side = CirclePerimeter(r) * h;
    lid = CircleArea(r);
    return(side + 2*lid);
}
double Volume(double r, double h)
{
    return(CircleArea(r) * h);
}
...

EECS10: Computational Methods in ECE, Lecture 5 (c) 2017 R. Doemer 54
```

• Program example: Cylinder.c (part 3/3)

```
/* main function */
    int main (void)
       double r, h, s, v;
        /* input section */
        printf("Please enter the radius: ");
        scanf("%lf", &r);
        printf("Please enter the height: ");
        scanf("%lf", &h);
        /* computation section */
        s = Surface(r, h);
        v = Volume(r, h);
        /* output section */
        printf("The surface area is %f.\n", s);
        printf("The volume is %f.\n", v);
        return 0;
    } /* end of main */
EECS10: Computational Methods in ECE, Lecture 5
                                                (c) 2017 R. Doemer
```

Functions

• Example session: Cylinder.c

```
% vi Cylinder.c
% gcc Cylinder.c -o Cylinder -Wall -ansi
% Cylinder
Please enter the radius: 5.0
Please enter the height: 8.0
The surface area is 408.407051.
The volume is 628.318540.
%
```

EECS10: Computational Methods in ECE, Lecture 5

(c) 2017 R. Doemer

56
