

# EECS 10: Computational Methods in Electrical and Computer Engineering

## Lecture 11

Rainer Dömer

doemer@uci.edu

The Henry Samueli School of Engineering  
Electrical Engineering and Computer Science  
University of California, Irvine

## Lecture 11: Overview

- Data Structures
  - Introduction
  - Arrays
    - Introduction
    - Indexing
    - Initialization
    - Multi-dimensional arrays
    - Operator associativity and precedence
  - Example 1
    - `Dice2.c`
  - Example 2
    - `Histogram.c`

# Data Structures

- Introduction
  - Until now, we have used (mostly) single data elements of basic (non-composite) type
    - integral types
    - floating point types
  - Most programs, however, require complex *data structures* using composite types
    - arrays, lists, queues, stacks
    - trees, graphs
    - dictionaries
  - ANSI C provides built-in support for
    - arrays
    - structures, unions, enumerators
    - pointers

EECS10: Computational Methods in ECE, Lecture 11

(c) 2018 R. Doemer

3

# Arrays

- Array data type in C
  - Composite data type
    - Type is an array of a sub-type (e.g. array of `int`)
  - Fixed number of elements
    - Array size is fixed at time of definition (e.g. 100 elements)
  - Element access by index (aka. subscript)
    - Element-access operator: `array[index]` (e.g. `A[42]`)
- Example:

```
int A[10]; /* array of ten integers */  
  
A[0] = 42; /* access to elements */  
A[1] = 100;  
A[2] = A[0] + 5 * A[1];
```

EECS10: Computational Methods in ECE, Lecture 11

(c) 2018 R. Doemer

4

# Arrays

- Array Indexing
  - Start counting from 0
    - First element has index 0
    - Last element has index *Size-1*
- Example:

```
int A[10];

A[0] = 42;
A[1] = 100;
A[2] = A[0] + 5 * A[1];
A[3] = -1;
A[4] = 44;
A[5] = 55;
/* ... */
A[9] = 99;
```

A
0      42
1      100
2      542
3      -1
4      44
5      55
6      0
7      0
8      0
9      99

EECS10: Computational Methods in ECE, Lecture 11

(c) 2018 R. Doemer

5

# Arrays

- Array Indexing
  - **for** loops are often very helpful
    - **for**(*i*=0; *i*<*N*; *i*++)
   
*{...A[i]...}*
- Example:

```
int A[10];
int i;

for(i=0; i<10; i++)
{ A[i] = i*10 + i;
}
for(i=0; i<10; i++)
{ printf("%d, ", A[i]);
}
```

A
0      0
1      11
2      22
3      33
4      44
5      55
6      66
7      77
8      88
9      99

0, 11, 22, 33, 44, 55, 66, 77, 88, 99,

EECS10: Computational Methods in ECE, Lecture 11

(c) 2018 R. Doemer

6

## Arrays

- Array Indexing
  - Array indices are *not* checked by the compiler, nor at runtime!
  - Accessing an array with an *index out of range* results in undefined behavior!
- Example:
 

```
int A[10];
int i;

A[-1] = 42; /* INVALID ACCESS! */

for(i=0; i<=10; i++)
/* INVALID LOOP RANGE!
{ printf("%d, ", A[i]);
}
```

0	0
1	0
2	0
3	0
4	0
5	0
6	0
7	0
8	0
9	0

(c) 2018 R. Doemer

## Arrays

- Array Initialization
  - Static initialization at time of array definition
  - Initial elements listed in {}
- Example:
 

```
int A[10] = { 42, 100,
                  310, 44,
                  55, 0,
                  3, 4,
                  0, 99};
```

0	42
1	100
2	310
3	44
4	55
5	0
6	3
7	4
8	0
9	99

(c) 2018 R. Doemer

## Arrays

- Array Initialization
  - Static initialization at time of array definition
  - Initial elements listed in {}
- Example:
 

```
int A[ ] = { 42, 100,
              310, 44,
              55, 0,
              3, 4,
              0, 99};
```
- With given initializer list, array size may be omitted
  - automatically determined

A
0 42
1 100
2 310
3 44
4 55
5 0
6 3
7 4
8 0
9 99

EECS10: Computational Methods in ECE, Lecture 11

(c) 2018 R. Doemer

9

## Arrays

- Array Initialization
  - Static initialization at time of array definition
  - Initial elements listed in {}
- Example:
 

```
int A[10] = { 1, 2, 3};
```
- With given initializer list and array size, unlisted elements are zero-initialized
  - array is filled up with zeros

A
0 1
1 2
2 3
3 0
4 0
5 0
6 0
7 0
8 0
9 0

EECS10: Computational Methods in ECE, Lecture 11

(c) 2018 R. Doemer

10

# Arrays

- Multi-dimensional Arrays
  - *Array of an array...*
- Example:

```

int M[3][2] = {{1, 2},
                {3, 4},
                {5, 6}};
int i, j;

for(i=0; i<3; i++)
    { for(j=0; j<2; j++)
        { printf("%d ",
                 M[i][j]);
        }
    printf("\n");
}

```

M	0	1
0	1	2
1	3	4
2	5	6

1	2
3	4
5	6

EECS10: Computational Methods in ECE, Lecture 11

(c) 2018 R. Doemer

11

# Arrays

- Operator associativity and precedence

– parentheses, <b>array access</b>	( ), [ ]	left to right
– unary operators	+ , - , ! , ++ , --	right to left
– type casting	( <b>typename</b> )	right to left
– multiplication, division, modulo	* , / , %	left to right
– addition, subtraction	+ , -	left to right
– shift left, shift right	<< , >>	left to right
– relational operators	< , <= , >= , >	left to right
– equality	== , !=	left to right
– logical and	&&	left to right
– logical or		left to right
– conditional operator	? :	left to right
– assignment operators	= , += , *= , etc.	right to left
– comma operator	,	left to right

EECS10: Computational Methods in ECE, Lecture 11

(c) 2018 R. Doemer

12

## Arrays

- Review program example: **Dice.c** (part 1/4)

```
/* Dice.c: roll the dice */  
/* author: Rainer Doemer */  
/* modifications: */  
/* 10/28/04 RD initial version */  
  
#include <stdio.h>  
#include <stdlib.h>  
#include <time.h>  
  
/* function definition */  
  
int roll(void)  
{  
    int r;  
  
    r = rand() % 6 + 1;  
    /* printf("Rolled a %d.\n", r); */  
    return r;  
} /* end of roll */  
...
```

EECS10: Computational Methods in ECE, Lecture 11

(c) 2018 R. Doemer

13

## Arrays

- Review program example: **Dice.c** (part 2/4)

```
...  
/* main function */  
  
int main(void)  
{  
    /* variable definitions */  
    int i, n;  
    int count1 = 0, count2 = 0, count3 = 0,  
        count4 = 0, count5 = 0, count6 = 0;  
  
    /* random number generator initialization */  
    srand(time(0));  
  
    /* input section */  
    printf("Roll the dice: How many times? ");  
    scanf("%d", &n);  
    ...
```

EECS10: Computational Methods in ECE, Lecture 11

(c) 2018 R. Doemer

14

## Arrays

- Review program example: `Dice.c` (part 3/4)

```
... /* computation section */
for(i = 0; i < n; i++)
    { switch(roll())
        { case 1:
            { count1++; break; }
        case 2:
            { count2++; break; }
        case 3:
            { count3++; break; }
        case 4:
            { count4++; break; }
        case 5:
            { count5++; break; }
        case 6:
            { count6++; break; }
        default:
            { printf("INVALID ROLL!");
                exit(10);
            } /* htiws */
        } /* rof */
...
...
```

EECS10: Computational Methods in ECE, Lecture 11

(c) 2018 R. Doemer

15

## Arrays

- Review program example: `Dice.c` (part 4/4)

```
...
/* output section */
printf("Rolled a 1 %d times.\n", count1);
printf("Rolled a 2 %d times.\n", count2);
printf("Rolled a 3 %d times.\n", count3);
printf("Rolled a 4 %d times.\n", count4);
printf("Rolled a 5 %d times.\n", count5);
printf("Rolled a 6 %d times.\n", count6);

/* exit */
return 0;
} /* end of main */

/* EOF */
```

EECS10: Computational Methods in ECE, Lecture 11

(c) 2018 R. Doemer

16

## Arrays

- Improved program example: **Dice2.c** (part 1/3)

```
/* Dice2.c: roll the dice */  
/* author: Rainer Doemer */  
/* modifications: */  
/* 11/04/04 RD  version using arrays */  
/* 10/28/04 RD  initial version */  
  
#include <stdio.h>  
#include <stdlib.h>  
#include <time.h>  
  
/* function definition */  
  
int roll(void)  
{  
    int r;  
  
    r = rand() % 6 + 1;  
    /* printf("Rolled a %d.\n", r); */  
    return r;  
} /* end of roll */  
  
...
```

EECS10: Computational Methods in ECE, Lecture 11

(c) 2018 R. Doemer

17

## Arrays

- Improved program example: **Dice2.c** (part 2/3)

```
...  
/* main function */  
  
int main(void)  
{  
    /* variable definitions */  
    int i, n;  
    int count[6] = { 0, 0, 0, 0, 0, 0 };  
  
    /* random number generator initialization */  
    srand(time(0));  
  
    /* input section */  
    printf("Roll the dice: How many times? ");  
    scanf("%d", &n);  
  
    ...
```

EECS10: Computational Methods in ECE, Lecture 11

(c) 2018 R. Doemer

18

## Arrays

- Improved program example: **Dice2.c** (part 3/3)

```

...
/* computation section */
for(i = 0; i < n; i++)
{ count[roll()-1]++;
} /* rof */

/* output section */
for(i = 0; i < 6; i++)
{ printf("Rolled a %d %5d times.\n",
       i+1, count[i]);
} /* rof */

/* exit */
return 0;
} /* end of main */

/* EOF */

```

## Arrays

- Example session: **Dice2.c**

```

% vi Dice2.c
% gcc Dice2.c -o Dice2 -Wall -ansi
% Dice2
Roll the dice: How many times? 6000
Rolled a 1 1009 times.
Rolled a 2 1005 times.
Rolled a 3 962 times.
Rolled a 4 998 times.
Rolled a 5 996 times.
Rolled a 6 1030 times.
% Dice2
Roll the dice: How many times? 6000
Rolled a 1 1042 times.
Rolled a 2 983 times.
Rolled a 3 972 times.
Rolled a 4 979 times.
Rolled a 5 1022 times.
Rolled a 6 1002 times.
%

```

## Arrays

- Program example: `Histogram.c`
  - Display a simple bar chart for 10 integer values
- Desired output:

```
% Histogram
Please enter data value 1: 111
Please enter data value 2: 222
Please enter data value 3: 33
Please enter data value 4: 333
[...]
Please enter data value 10: 111
1: 111 ****
2: 222 ****
3: 33 ***
4: 333 ****
[...]
10: 111 ****
%
```

## Arrays

- Program example: `Histogram.c` (part 1/3)

```
/* Histogram.c: print a histogram of data values */
/* author: Rainer Doemer */
/* modifications: */
/* 11/02/04 RD initial version */

#include <stdio.h>

/* constants */

#define NUM_ROWS 10

/* main function */

int main(void)
{
    /* variable definitions */
    int Data[NUM_ROWS];
    int i, j, max;
    double scale;

    ...
}
```

## Arrays

- Program example: `Histogram.c` (part 2/3)

```

...
/* input section */
for(i = 0; i < NUM_ROWS; i++)
    { printf("Please enter data value %2d: ", i+1);
      scanf("%d", &Data[i]);
    } /* rof */

/* computation section */
max = 0;
for(i = 0; i < NUM_ROWS; i++)
    { if (Data[i] > max)
        { max = Data[i];
        } /* fi */
    } /* rof */
scale = 70.0 / max;

...

```

## Arrays

- Program example: `Histogram.c` (part 3/3)

```

...
/* output section */
for(i = 0; i < NUM_ROWS; i++)
    { printf("%2d: %5d ", i+1, Data[i]);
      for(j = 0; j < Data[i]*scale; j++)
          { printf("*");
          } /* rof */
      printf("\n");
    } /* rof */

/* exit */
return 0;
} /* end of main */

/* EOF */

```

## Arrays

- Example session: `Histogram.c`

```
% vi Histogram.c
% gcc Histogram.c -o Histogram -Wall -ansi
% Histogram
