

EECS 10: Computational Methods in Electrical and Computer Engineering

Lecture 10

Rainer Dömer

doemer@uci.edu

The Henry Samueli School of Engineering
Electrical Engineering and Computer Science
University of California, Irvine

Lecture 10: Overview

- Functions
 - Terms and concepts
 - Scope rules
 - Scope example
- Debugging
 - Scopes
- Library Functions
 - Math library functions
 - Example `Function.c`
 - Standard library functions
 - Example `Dice.c`

Functions

- Review: Terms and Concepts
 - Function declaration
 - Function prototype with name, parameters, and return type
 - Function definition
 - Extended declaration, defines the behavior in function body
 - Function call
 - Expression invoking a function with supplied arguments
 - Function parameters
 - Formal parameters holding the data supplied to a function
 - Function arguments
 - Arguments passed to a function call (initial values for parameters)
 - Local variables
 - Variables defined locally in a function body (or compound statement)
 - Global variables
 - Variables defined globally outside of any function

Functions

- Scope of an identifier
 - Portion of the program where the identifier can be referenced
 - aka. accessibility, visibility
- Scope rules
 - Global variables: *file scope*
 - Declaration outside any function (at global level)
 - Scope in entire source file after declaration
 - Function parameters: *function scope*
 - Declaration in function parameter list
 - Scope limited to this function body (entirely)
 - Local variables: *block scope*
 - Declaration inside a compound statement (i.e. function body)
 - Scope limited to this compound statement block (entirely)

Scope Rules: Example

```
#include <stdio.h>
int square(int a);
int add_y(int x);
int x = 5,
     y = 7;
int square(int a)
{
    int s;
    s = a * a;
    return s;
}
int add_y(int x)
{
    int s;
    s = x + y;
    return s;
}
int main(void)
{
    int z;
    z = square(x);
    z = add_y(z);
    printf("%d\n", z);
    return 0;
}
```

Header file inclusion
Function declarations

Global variables

Function definition
Local variable

Function definition
Local variable

Function definition
Local variable

Scope Rules: Example

```
#include <stdio.h>
int square(int a);
int add_y(int x);
int x = 5,
     y = 7;
int square(int a)
{
    int s;
    s = a * a;
    return s;
}
int add_y(int x)
{
    int s;
    s = x + y;
    return s;
}
int main(void)
{
    int z;
    z = square(x);
    z = add_y(z);
    printf("%d\n", z);
    return 0;
}
```

Scope of global functions
`printf()`, `scanf()`, etc.

Scope Rules: Example

```
#include <stdio.h>
int square(int a);
int add_y(int x);
int x = 5,
     y = 7;
int square(int a)
{
    int s;
    s = a * a;
    return s;
}
int add_y(int x)
{
    int s;
    s = x + y;
    return s;
}
int main(void)
{
    int z;
    z = square(x);
    z = add_y(z);
    printf("%d\n", z);
    return 0;
}
```

Scope of global function
square()

EECS10: Computational Methods in ECE, Lecture 10

(c) 2019 R. Doemer

7

Scope Rules: Example

```
#include <stdio.h>
int square(int a);
int add_y(int x);
int x = 5,
     y = 7;
int square(int a)
{
    int s;
    s = a * a;
    return s;
}
int add_y(int x)
{
    int s;
    s = x + y;
    return s;
}
int main(void)
{
    int z;
    z = square(x);
    z = add_y(z);
    printf("%d\n", z);
    return 0;
}
```

Scope of global function
add_y()

EECS10: Computational Methods in ECE, Lecture 10

(c) 2019 R. Doemer

8

Scope Rules: Example

```
#include <stdio.h>
int square(int a);
int add_y(int x);
int x = 5,
     y = 7;
int square(int a)
{
    int s;
    s = a * a;
    return s;
}
int add_y(int x)
{
    int s;
    s = x + y;
    return s;
}
int main(void)
{
    int z;
    z = square(x);
    z = add_y(z);
    printf("%d\n", z);
    return 0;
}
```

Scope of global variable
x

EECS10: Computational Methods in ECE, Lecture 10

(c) 2019 R. Doemer

9

Scope Rules: Example

```
#include <stdio.h>
int square(int a);
int add_y(int x);
int x = 5,
     y = 7;
int square(int a)
{
    int s;
    s = a * a;
    return s;
}
int add_y(int x)
{
    int s;
    s = x + y;
    return s;
}
int main(void)
{
    int z;
    z = square(x);
    z = add_y(z);
    printf("%d\n", z);
    return 0;
}
```

Scope of global variable
y

EECS10: Computational Methods in ECE, Lecture 10

(c) 2019 R. Doemer

10

Scope Rules: Example

```
#include <stdio.h>
int square(int a);
int add_y(int x);
int x = 5,
     y = 7;
int square(int a)
{
    int s;
    s = a * a;
    return s;
}
int add_y(int x)
{
    int s;
    s = x + y;
    return s;
}
int main(void)
{
    int z;
    z = square(x);
    z = add_y(z);
    printf("%d\n", z);
    return 0;
}
```

Scope of parameter
a

EECS10: Computational Methods in ECE, Lecture 10

(c) 2019 R. Doemer

11

Scope Rules: Example

```
#include <stdio.h>
int square(int a);
int add_y(int x);
int x = 5,
     y = 7;
int square(int a)
{
    int s;
    s = a * a;
    return s;
}
int add_y(int x)
{
    int s;
    s = x + y;
    return s;
}
int main(void)
{
    int z;
    z = square(x);
    z = add_y(z);
    printf("%d\n", z);
    return 0;
}
```

Scope of local variable
s

EECS10: Computational Methods in ECE, Lecture 10

(c) 2019 R. Doemer

12

Scope Rules: Example

```
#include <stdio.h>
int square(int a);
int add_y(int x);
int x = 5,
    y = 7;
int square(int a)
{
    int s;
    s = a * a;
    return s;
}
int add_y(int x)
{
    int s;
    s = x + y;
    return s;
}
int main(void)
{
    int z;
    z = square(x);
    z = add_y(z);
    printf("%d\n", z);
    return 0;
}
```

Local variables

are independent!

(unless their scopes are nested)

Scope of local variable

s

Scope of local variable

s

Scope Rules: Example

```
#include <stdio.h>
int square(int a);
int add_y(int x);
int x = 5,
    y = 7;
int square(int a)
{
    int s;
    s = a * a;
    return s;
}
int add_y(int x)
{
    int s;
    s = x + y;
    return s;
}
int main(void)
{
    int z;
    z = square(x);
    z = add_y(z);
    printf("%d\n", z);
    return 0;
}
```

Local variables

are independent!

(unless their scopes are nested)

Scope of local variable

s

Scope of local variable

s

Scope of local variable

z

Scope Rules: Example

```
#include <stdio.h>
int square(int a);
int add_y(int x);
int x = 5,
    y = 7;
int square(int a)
{
    int s;
    s = a * a;
    return s;
}
int add_y(int x)
{
    int s;
    s = x + y;
    return s;
}
int main(void)
{
    int z;
    z = square(x);
    z = add_y(z);
    printf("%d\n", z);
    return 0;
}
```

Scope of parameter
x

EECS10: Computational Methods in ECE, Lecture 10

(c) 2019 R. Doemer

15

Scope Rules: Example

```
#include <stdio.h>
int square(int a);
int add_y(int x);
int x = 5,
    y = 7;
int square(int a)
{
    int s;
    s = a * a;
    return s;
}
int add_y(int x)
{
    int s;
    s = x + y;
    return s;
}
int main(void)
{
    int z;
    z = square(x);
    z = add_y(z);
    printf("%d\n", z);
    return 0;
}
```

Shadowing!

In nested scopes,
inner scope takes precedence!

Scope of global variable
x

Scope of parameter
x

EECS10: Computational Methods in ECE, Lecture 10

(c) 2019 R. Doemer

16

Debugging

- Source-level Debugger **gdb**
 - Basic **gdb** commands
 - **run**
 - starts the execution of the program in the debugger
 - **break function_name (or line_number)**
 - inserts a breakpoint; program execution will stop at the breakpoint
 - **cont**
 - continues the execution of the program in the debugger
 - **list from_line_number,to_line_number**
 - lists the current or specified range of line_numbers
 - **print variable_name**
 - prints the current value of the variable **variable_name**
 - **next**
 - executes the next statement (one statement at a time)
 - **quit**
 - exits the debugger (and terminates the program)
 - **help**
 - provides helpful details on debugger commands

EECS10: Computational Methods in ECE, Lecture 10

(c) 2019 R. Doemer

17

Debugging

- Source-level Debugger **gdb** (continued)
 - Additional **gdb** commands
 - **step**
 - steps into a function call
 - **finish**
 - continues execution until the current function is finished
 - **where**
 - shows where in the function call hierarchy you are
 - prints a *back trace* of current *stack frames*
 - **up**
 - steps up one stack frame (up into the caller)
 - **down**
 - steps down one stack frame (down into the callee)
 - **info locals**
 - lists the local variables in the current function (current stack frame)
 - **info scope function_name**
 - lists the variables in scope of the **function_name**

EECS10: Computational Methods in ECE, Lecture 10

(c) 2019 R. Doemer

18

Scope Rules: Example

- Program example: **Scope.c** (part 1/2)

```
/* Scope.c: example demonstrating scope rules */
/* author: Rainer Doemer */
/* modifications: */
/* 10/30/04 RD initial version */

#include <stdio.h>

int square(int a);      /* global function declarations */
int add_y(int x);

int x = 5,              /* global variables */
    y = 7;

int square(int a)        /* global function definition */
{
    int s;                /* local variable */

    s = a * a;
    return s;
}
...
```

Scope Rules: Example

- Program example: **Scope.c** (part 2/2)

```
...
int add_y(int x)          /* global function definition */
{
    int s;                /* local variable */

    s = x + y;
    return s;
}

int main(void)            /* main function definition */
{
    int z;                /* local variable */

    z = square(x);
    z = add_y(z);

    printf("%d, %d, %d\n", x, y, z);
    return 0;
}
/* EOF */
```

Scope Rules: Example

- Example session: **scope.c** (part 1/3)

```
% vi Scope.c
% gcc Scope.c -o Scope -Wall -ansi -g
% ./Scope
5, 7, 32
% gdb ./Scope
GNU gdb 5.0
[...]
(gdb) break main
Breakpoint 1 at 0x1079c: file Scope.c, line 36.
(gdb) run
Starting program: /users/faculty/doemer/eecs10/Scope/Scope

Breakpoint 1, main () at Scope.c:36
36          z = square(x);
(gdb) step
square (a=5) at Scope.c:20
20          s = a * a;
(gdb) next
21          return s;
...
EE
```

Scope Rules: Example

- Example session: **scope.c** (part 2/3)

```
...
(gdb) next
22      }
(gdb) next
main () at Scope.c:37
37          z = add_y(z);
(gdb) step
add_y (x=25) at Scope.c:28
28          s = x + y;
(gdb) where
#0  add_y (x=25) at Scope.c:28
#1  0x107c4 in main () at Scope.c:37
(gdb) up
#1  0x107c4 in main () at Scope.c:37
37          z = add_y(z);
(gdb) down
#0  add_y (x=25) at Scope.c:28
28          s = x + y;
...
EE
```

Scope Rules: Example

- Example session: `scope.c` (part 3/3)

```
...
(gdb) finish
Run till exit from #0  add_y (x=25) at Scope.c:28
0x107c4 in main () at Scope.c:37
37      z = add_y(z);
Value returned is $1 = 32
(gdb) info locals
z = 25
(gdb) info scope square
Scope for square:
Symbol a is an argument at stack/frame offset 68, length 4.
Symbol s is a local variable at frame offset -20, length 4.
(gdb) info scope add_y
Scope for add_y:
Symbol x is an argument at stack/frame offset 68, length 4.
Symbol s is a local variable at frame offset -20, length 4.
(gdb) quit
%
```

Math Library Functions

- C standard math library
 - standard library supplied with every C compiler
 - predefined mathematical functions
 - e.g. `cos(x)`, `sqrt(x)`, etc.
- Math library header file
 - contains math function declarations
 - `#include <math.h>`
- Math library linker file
 - contains math function definitions (pre-compiled)
 - library file `libm.a`
 - compiler needs to *link* against the math library
 - use option `-llibraryname`
 - Example: `gcc MathProgram.c -o MathProgram -lm`

Math Library Functions

- Functions declared in `math.h` (part 1/2)

| | |
|---|---------------------|
| - <code>double sqrt(double x);</code> | \sqrt{x} |
| - <code>double pow(double x, double y);</code> | x^y |
| - <code>double exp(double x);</code> | e^x |
| - <code>double log(double x);</code> | $\log(x)$ |
| - <code>double log10(double x);</code> | $\log_{10}(x)$ |
| - <code>double ceil(double x);</code> | $\lceil x \rceil$ |
| - <code>double floor(double x);</code> | $\lfloor x \rfloor$ |
| - <code>double fabs(double x);</code> | $ x $ |
| - <code>double fmod(double x, double y);</code> | $x \bmod y$ |

Math Library Functions

- Functions declared in `math.h` (part 2/2)

| | |
|---------------------------------------|--------------|
| - <code>double cos(double x);</code> | $\cos(x)$ |
| - <code>double sin(double x);</code> | $\sin(x)$ |
| - <code>double tan(double x);</code> | $\tan(x)$ |
| - <code>double acos(double x);</code> | $\arccos(x)$ |
| - <code>double asin(double x);</code> | $\arcsin(x)$ |
| - <code>double atan(double x);</code> | $\arctan(x)$ |
| - <code>double cosh(double x);</code> | $\cosh(x)$ |
| - <code>double sinh(double x);</code> | $\sinh(x)$ |
| - <code>double tanh(double x);</code> | $\tanh(x)$ |

Math Library Functions

- Program example: **Function.c** (part 1/3)

```
/* Function.c: compute a math function table */
/*
 * author: Rainer Doemer
 */
/*
 * modifications:
 * 10/28/04 RD initial version
 */

#include <stdio.h>
#include <math.h>

/* function definition */

double f(double x)
{
    return cos(x);
} /* end of f */

...
```

Math Library Functions

- Program example: **Function.c** (part 2/3)

```
...
/* main function */

int main(void)
{
    /* variable definitions */
    double hi, lo, step;
    double x, y;

    /* input section */
    printf("Please enter the lower bound: ");
    scanf("%lf", &lo);
    printf("Please enter the upper bound: ");
    scanf("%lf", &hi);
    printf("Please enter the step size:   ");
    scanf("%lf", &step);

    ...
}
```

Math Library Functions

- Program example: **Function.c** (part 3/3)

```
...
/* computation and output section */
for(x = lo; x <= hi; x += step)
{
    y = f(x);
    printf("f(%10g) = %10g\n", x, y);
} /* rof */

/* exit */
return 0;
} /* end of main */

/* EOF */
```

Math Library Functions

- Example session: **Function.c**

```
% vi Function.c
% gcc Function.c -o Function -Wall -ansi -lm
% ./Function
Please enter the lower bound: -0.5
Please enter the upper bound: 1.0
Please enter the step size: .1
f( -0.5) = 0.877583
f( -0.4) = 0.921061
f( -0.3) = 0.955336
f( -0.2) = 0.980067
f( -0.1) = 0.995004
f(-2.77556e-17) = 1
f( 0.1) = 0.995004
f( 0.2) = 0.980067
f( 0.3) = 0.955336
f( 0.4) = 0.921061
f( 0.5) = 0.877583
f( 0.6) = 0.825336
f( 0.7) = 0.764842
f( 0.8) = 0.696707
f( 0.9) = 0.62161
f( 1) = 0.540302
%
```

Standard Library Functions

- Standard C library
 - standard library supplied with every C compiler
 - predefined standard functions
 - e.g. `printf()`, `scanf()`, etc.
- C library header files
 - input/output function declarations `#include <stdio.h>`
 - standard function declarations `#include <stdlib.h>`
 - time function declarations `#include <time.h>`
 - etc.
- C library linker file
 - contains standard function definitions (pre-compiled)
 - library file `libc.a`
 - compiler *automatically links* against the standard library (no need to supply extra options)

Standard Library Functions

- Functions declared in `stdlib.h` (partial list)
 - `int abs(int x);`
 - `long int labs(long int x);`
 - return the absolute value of a (long) integer `x`
 - `int rand(void);`
 - return a random value in the range 0 – `RAND_MAX`
 - `RAND_MAX` is a constant integer (e.g. 32767)
 - `void srand(unsigned int seed);`
 - initialize the random number generator with value `seed`
 - `void exit(int result);`
 - exit the program with return value `result`
 - `void abort(void);`
 - abort the program (with an error result)

Standard Library Functions

- Random number generation
 - Standard library provides *pseudo* random number generator
 - `int rand(void);`
 - Pseudo random numbers are a sequence of values seemingly random in the range 0 – `RAND_MAX`
 - Computer is a *deterministic* machine
 - Sequence will always be the same
 - Start of sequence is determined by *seed* value
 - `void srand(unsigned int seed);`
 - Trick: Initialize random sequence with current time
 - header file `time.h` declares function `unsigned int time()`
 - `time(0)` returns number of seconds since Jan 1, 1970
 - at beginning of program, use:
`srand(time(0));`

Standard Library Functions

- Program example: `Dice.c` (part 1/4)

```
/* Dice.c: roll the dice */  
/* author: Rainer Doemer */  
/* modifications: */  
/* 10/28/04 RD initial version */  
  
#include <stdio.h>  
#include <stdlib.h>  
#include <time.h>  
  
/* function definition */  
  
int roll(void)  
{  
    int r;  
  
    r = rand() % 6 + 1;  
    /* printf("Rolled a %d.\n", r); */  
    return r;  
} /* end of roll */  
...
```

Standard Library Functions

- Program example: **Dice.c** (part 2/4)

```
...
/* main function */

int main(void)
{
    /* variable definitions */
    int i, n;
    int count1 = 0, count2 = 0, count3 = 0,
        count4 = 0, count5 = 0, count6 = 0;

    /* random number generator initialization */
    srand(time(0));

    /* input section */
    printf("Roll the dice: How many times? ");
    scanf("%d", &n);

    ...
}
```

Standard Library Functions

- Program example: **Dice.c** (part 3/4)

```
... /* computation section */
for(i = 0; i < n; i++)
{
    switch(roll())
    {
        case 1:
            { count1++; break; }
        case 2:
            { count2++; break; }
        case 3:
            { count3++; break; }
        case 4:
            { count4++; break; }
        case 5:
            { count5++; break; }
        case 6:
            { count6++; break; }
        default:
            { printf("INVALID ROLL!");
                exit(10);
            } /* hctiws */
    } /* rof */
}
...
}
```

Standard Library Functions

- Program example: **Dice.c** (part 4/4)

```
...
/* output section */
printf("Rolled a 1 %d times.\n", count1);
printf("Rolled a 2 %d times.\n", count2);
printf("Rolled a 3 %d times.\n", count3);
printf("Rolled a 4 %d times.\n", count4);
printf("Rolled a 5 %d times.\n", count5);
printf("Rolled a 6 %d times.\n", count6);

/* exit */
return 0;
} /* end of main */

/* EOF */
```

Standard Library Functions

- Example session: **Dice.c**

```
% vi Dice.c
% gcc Dice.c -o Dice -Wall -ansi
% ./Dice
Roll the dice: How many times? 6000
Rolled a 1  963 times.
Rolled a 2  995 times.
Rolled a 3  1038 times.
Rolled a 4  1024 times.
Rolled a 5  984 times.
Rolled a 6  996 times.
% ./Dice
Roll the dice: How many times? 6000
Rolled a 1  977 times.
Rolled a 2  1043 times.
Rolled a 3  1012 times.
Rolled a 4  1001 times.
Rolled a 5  963 times.
