

EECS 10: Computational Methods in Electrical and Computer Engineering

Lecture 12

Rainer Dömer

doemer@uci.edu

The Henry Samueli School of Engineering
Electrical Engineering and Computer Science
University of California, Irvine

Lecture 12: Overview

- Passing arguments to functions
 - Pass by value
 - Pass by reference
- Character Arrays: Strings
 - Input and output
 - ASCII table
 - Example: Sort strings alphabetically
 - Task
 - Approach
 - Algorithm *Bubble Sort*
 - Program `BubbleSort.c`

Passing Arguments to Functions

- Pass by Value
 - only the *current value* is passed as argument
 - the parameter is a *copy* of the argument
 - changes to the parameter *do not affect* the argument
- Pass by Reference
 - a *reference* to the object is passed as argument
 - the parameter is a *reference* to the argument
 - changes to the parameter *do affect* the argument
- In ANSI C, ...
 - ... basic types are passed by value
 - ... arrays are passed by reference

Passing Arguments to Functions

- Example: Pass by Value

```
void f(int p)
{
    printf("p before modification is %d\n", p);
    p = 42;
    printf("p after modification is %d\n", p);
}

int main(void)
{
    int a = 0;

    printf("a before function call is %d\n", a);
    f(a);
    printf("a after function call is %d\n", a);
}
```

```
a before function call is 0
p before modification is 0
p after modification is 42
a after function call is 0
```

Changes to the parameter *do not affect* the argument!

Passing Arguments to Functions

- Example: Pass by Reference

```
void f(int p[2])
{
    printf("p[1] before modification is %d\n", p[1]);
    p[1] = 42;
    printf("p[1] after modification is %d\n", p[1]);
}

int main(void)
{
    int a[2] = {0, 0};
    printf("a[1] before function call is %d\n", a[1]);
    f(a);
    printf("a[1] after function call is %d\n", a[1]);
}
```

```
a[1] before function call is 0
p[1] before modification is 0
p[1] after modification is 42
a[1] after function call is 42
```

Changes to the parameter do affect the argument!

Character Arrays: Strings

- Text is represented by character arrays (aka. *strings*)
 - Strings are null-terminated arrays of characters
 - String output
 - `printf()` format specifier: "%s"
- Example:

```
char s1[] = {'H','e','l','l','o',0};

printf("s1 is %s.\n", s1);
```

```
s1 is Hello.
```

s1	
0	'H'
1	'e'
2	'l'
3	'l'
4	'o'
5	0

Character Arrays: Strings

- Text is represented by character arrays (aka. *strings*)
 - Strings are null-terminated arrays of characters
 - String output
 - `printf()` format specifier: `"%s"`
- Example:

```
char s1[] = {'H','e','l','l','o',0};
char s2[] = "Hello";

printf("s1 is %s.\n", s1);
printf("s2 is %s.\n", s2);
```

s1 is Hello.
s2 is Hello.

s2	
0	'H'
1	'e'
2	'l'
3	'l'
4	'o'
5	0

Character Arrays: Strings

- Text is represented by character arrays (aka. *strings*)
 - Strings are null-terminated arrays of characters
 - String output
 - `printf()` format specifier: `"%s"`
- Example:

```
char s1[] = {'H','e','l','l','o',0};
char s2[] = "Hello";

printf("s1 is %s.\n", s1);
printf("s2 is %s.\n", s2);
s1[1] = 'i';
s1[2] = 0;
printf("Modified s1 is %s.\n", s1);
```

s1 is Hello.
s2 is Hello.
Modified s1 is Hi.

s1	
0	'H'
1	'i'
2	0
3	'l'
4	'o'
5	0

Character Arrays: Strings

- Text is represented by character arrays (aka. *strings*)
 - Strings are null-terminated arrays of characters
 - String input
 - `scanf()` format specifier: "%Ns", where N specifies maximum field width = array size - 1
 - address argument can be `&string[0]`
- Example:

```
char s1[6];
printf("Enter a string: ");
scanf("%5s", &s1[0]);
printf("s1 is %s.\n", s1);
```

Enter a string: Test
s1 is Test.

s1	
0	'T'
1	'e'
2	's'
3	't'
4	0
5	0

Character Arrays: Strings

- Text is represented by character arrays (aka. *strings*)
 - Strings are null-terminated arrays of characters
 - String input
 - `scanf()` format specifier: "%Ns", where N specifies maximum field width = array size - 1
 - address argument can be `&string[0]` or simply `string`
- Example:

```
char s1[6];
printf("Enter a string: ");
scanf("%5s", s1);
printf("s1 is %s.\n", s1);
```

Enter a string: Test
s1 is Test.

s1	
0	'T'
1	'e'
2	's'
3	't'
4	0
5	0

Character Arrays: Strings

- Text is represented by character arrays (aka. *strings*)
 - Strings are null-terminated arrays of characters
 - Characters are represented by numeric values
 - ASCII table defines character values 0-127
- Example:

```
char s1[] = "ABC12";
int i = 0;

while(s1[i])
{ printf("%c = %d\n",s1[i],s1[i]);
  i++; }
```

```
A = 65
B = 66
C = 67
1 = 49
2 = 50
```

s1	
0	'A'
1	'B'
2	'C'
3	'1'
4	'2'
5	0

Character Arrays: Strings

- ASCII Table
 - American Standard Code for Information Interchange

0 <i>NUL</i>	1 <i>SOH</i>	2 <i>STX</i>	3 <i>ETX</i>	4 <i>EOT</i>	5 <i>ENQ</i>	6 <i>ACK</i>	7 <i>BEL</i>
8 <i>BS</i>	9 <i>HT</i>	10 <i>NL</i>	11 <i>VT</i>	12 <i>NP</i>	13 <i>CR</i>	14 <i>SO</i>	15 <i>SI</i>
16 <i>DLE</i>	17 <i>DC1</i>	18 <i>DC2</i>	19 <i>DC3</i>	20 <i>DC4</i>	21 <i>NAK</i>	22 <i>SYN</i>	23 <i>ETB</i>
24 <i>CAN</i>	25 <i>EM</i>	26 <i>SUB</i>	27 <i>ESC</i>	28 <i>FS</i>	29 <i>GS</i>	30 <i>RS</i>	31 <i>US</i>
32	33 !	34 "	35 #	36 \$	37 %	38 &	39 '

112 p	113 q	114 r	115 s	116 t	117 u	118 v	119 w
120 x	121 y	122 z	123 {	124	125 }	126 ~	127 <i>DEL</i>

Character Arrays: Strings

- Case Study: *Bubble Sort*
 - Task: Sort an array of strings alphabetically
 - Input: Array of 10 strings entered by the user
 - Output: Array of 10 strings in alphabetical order
- Approach: Divide and Conquer
 - Step 1: Let user enter 10 strings
 - Step 2: Sort the array of strings
 - Step 3: Output the strings in order

Character Arrays: Strings

- Case Study: *Bubble Sort*
 - Task: Sort an array of strings alphabetically
 - Input: Array of 10 strings entered by the user
 - Output: Array of 10 strings in alphabetical order
- Approach: Divide and Conquer
 - Step 1: Let user enter 10 strings
 - Step 2: Sort the array of strings
 - Algorithm
 - in 9 rounds, compare all adjacent pairs of strings and swap the pair if they are not in alphabetical order
 - String comparison
 - compare character pairs alphabetically: use ASCII values!
 - String swap (exchange two strings in place)
 - swap each character pair in the two strings
 - Step 3: Output the strings in order

Character Arrays: Strings

- Program example: **BubbleSort.c** (part 1/7)

```
/* BubbleSort.c: sort strings alphabetically      */
/* author: Rainer Doemer                         */
/* modifications:                                */
/* 11/01/06 RD  swap only adjacent elements    */
/* 11/06/04 RD  initial version                 */
#include <stdio.h>

/* constant definitions */

#define NUM 10 /* ten strings */
#define LEN 20 /* of length 20 */

/* function declarations */

void EnterText(char Text[NUM][LEN]);
void PrintText(char Text[NUM][LEN]);
int CompareStrings(char s1[LEN], char s2[LEN]);
void SwapStrings(char s1[LEN], char s2[LEN]);
void BubbleSort(char Text[NUM][LEN]);
...
```

Character Arrays: Strings

- Program example: **BubbleSort.c** (part 2/7)

```
...
/* function definitions */

/* let the user enter the text array           */

void EnterText(char Text[NUM][LEN])
{
    int i;

    for(i = 0; i < NUM; i++)
        { printf("Enter text string %2d: ", i+1);
          scanf("%19s", Text[i]);
        } /* rof */
} /* end of EnterText */

...
```

Character Arrays: Strings

- Program example: **BubbleSort.c** (part 3/7)

```
...
/* print the text array on the screen */
void PrintText(char Text[NUM][LEN])
{
    int i;

    for(i = 0; i < NUM; i++)
        { printf("String %2d: %s\n", i+1, Text[i]);
        } /* rof */
} /* end of PrintText */

...
```

Character Arrays: Strings

- Program example: **BubbleSort.c** (part 4/7)

```
...
/* alphabetically compare strings s1 and s2:      */
/* return -1, if string s1 < string s2           */
/* return  0, if string s1 = string s2           */
/* return  1, if string s1 > string s2           */
int CompareStrings(char s1[LEN], char s2[LEN])
{
    int i;

    for(i = 0; i < LEN; i++)
        { if (s1[i] > s2[i])
            { return(1); }
            if (s1[i] < s2[i])
            { return(-1); }
            if (s1[i] == 0 || s2[i] == 0)
            { break; }
        } /* rof */
    return 0;
} /* end of CompareStrings */
...
```

Character Arrays: Strings

- Program example: **BubbleSort.c** (part 5/7)

```
...
/* swap/exchange the strings s1 and s2 in place */

void SwapStrings(char s1[LEN], char s2[LEN])
{
    int i;
    char c;

    for(i = 0; i < LEN; i++)
    {
        c = s1[i];
        s1[i] = s2[i];
        s2[i] = c;
    } /* rof */
} /* end of SwapStrings */

...
```

Character Arrays: Strings

- Program example: **BubbleSort.c** (part 6/7)

```
...
/* sort the text array by comparing every pair */
/* of strings; if the pair of strings is not in */
/* alphabetical order, swap it */

void BubbleSort(char Text[NUM][LEN])
{
    int p, i;

    for(p = 1; p < NUM; p++)
        { for(i = 0; i < NUM-1; i++)
            { if (CompareStrings(Text[i], Text[i+1]) > 0)
                { SwapStrings(Text[i], Text[i+1]);
                } /* fi */
            } /* rof */
        } /* rof */
} /* end of BubbleSort */

...
```

Character Arrays: Strings

- Program example: **BubbleSort.c** (part 7/7)

```
...
/* main function: enter, sort, print the text */
int main(void)
{
    /* local variables */
    char Text[NUM][LEN]; /* NUM strings, length LEN */

    /* input section */
    EnterText(Text);

    /* computation section */
    BubbleSort(Text);

    /* output section */
    PrintText(Text);

    /* exit */
    return 0;
} /* end of main */

/* EOF */
```

Character Arrays: Strings

- Example session: **BubbleSort.c**

```
% vi BubbleSort.c
% gcc BubbleSort.c -o BubbleSort -Wall -ansi
% ./BubbleSort
Enter text string 1: Charlie
Enter text string 2: William
Enter text string 3: Donald
Enter text string 4: John
Enter text string 5: Jane
Enter text string 6: Jessie
Enter text string 7: Donald
Enter text string 8: Henry
Enter text string 9: George
Enter text string 10: Emily
String 1: Charlie
String 2: Donald
String 3: Donald
String 4: Emily
String 5: George
String 6: Henry
String 7: Jane
String 8: Jessie
String 9: John
String 10: William
%
```
