

EECS 10: Computational Methods in Electrical and Computer Engineering

Lecture 3

Rainer Dömer

doemer@uci.edu

The Henry Samueli School of Engineering
Electrical Engineering and Computer Science
University of California, Irvine

Lecture 3: Overview

- Review Quiz
- Our second C Program
 - Program structure
 - Input, Computation, Output
 - Example `addition.c`
- Basic Types in C
 - Integer types
 - Floating point types
- Arithmetic Operations in C
 - Arithmetic operators
 - Evaluation order

Quiz: Question 1

- Which Linux command shows you the path to the current directory?
 - a) `cd`
 - b) `pwd`
 - c) `dir`
 - d) `ls`
 - e) `list`

EECS10: Computational Methods in ECE, Lecture 3

(c) 2019 R. Doemer

3

Quiz: Question 1

- Which Linux command shows you the path to the current directory?
 - a) `cd`
 -  b) `pwd`
 - c) `dir`
 - d) `ls`
 - e) `list`

EECS10: Computational Methods in ECE, Lecture 3

(c) 2019 R. Doemer

4

Quiz: Question 2

- Which of the following Linux commands renames file “text1” into “homework1”?
 - a) `ren text1 homework1`
 - b) `ren homework1 text1`
 - c) `rm text1 homework1`
 - d) `mv homework1 text1`
 - e) `mv text1 homework1`

EECS10: Computational Methods in ECE, Lecture 3

(c) 2019 R. Doemer

5

Quiz: Question 2

- Which of the following Linux commands renames file “text1” into “homework1”?
 - a) `ren text1 homework1`
 - b) `ren homework1 text1`
 - c) `rm text1 homework1`
 - d) `mv homework1 text1`
 -  e) `mv text1 homework1`

EECS10: Computational Methods in ECE, Lecture 3

(c) 2019 R. Doemer

6

Quiz: Question 3

- What is C *not*?
 - a) a structured programming language
 - b) a object-oriented programming language
 - c) a compiled programming language
 - d) a high-level programming language
 - e) a portable programming language

EECS10: Computational Methods in ECE, Lecture 3

(c) 2019 R. Doemer

7

Quiz: Question 3

- What is C *not*?
 - a) a structured programming language
 -  b) a object-oriented programming language
 - c) a compiled programming language
 - d) a high-level programming language
 - e) a portable programming language

EECS10: Computational Methods in ECE, Lecture 3

(c) 2019 R. Doemer

8

Quiz: Question 4

- What is the meaning of the following code fragment?

```
/* printf("C programming is great!\n") */
```

- a) it prints "C programming is boring!"
- b) it prints "C programming is great!"
- c) it is a syntax error because a semicolon is missing after the `printf()` statement
- d) it is the main function of the C program
- e) it is a comment ignored by the compiler

Quiz: Question 4

- What is the meaning of the following code fragment?

```
/* printf("C programming is great!\n") */
```

- a) it prints "C programming is boring!"
- b) it prints "C programming is great!"
- c) it is a syntax error because a semicolon is missing after the `printf()` statement
- d) it is the main function of the C program
-  e) it is a comment ignored by the compiler

Quiz: Question 5

- What is true about of the following compiler call? (Check all that apply!)

```
% gcc HelloWorld.c -Wall -ansi -o HelloWorld
```

- a) the GNU C Compiler is called to generate an executable program called `HelloWorld`
- b) the compiler will print warning and/or error messages about any non-ANSI compliance in the code
- c) the compiler will ignore all warnings
- d) the compiler will read the file `HelloWorld.c`
- e) the compiler will overwrite the `HelloWorld` file if it already exists

EECS10: Computational Methods in ECE, Lecture 3

(c) 2019 R. Doemer

11

Quiz: Question 5

- What is true about of the following compiler call? (Check all that apply!)

```
% gcc HelloWorld.c -Wall -ansi -o HelloWorld
```

- a) the GNU C Compiler is called to generate an executable program called `HelloWorld`
- b) the compiler will print warning and/or error messages about any non-ANSI compliance in the code
- c) the compiler will ignore all warnings
- d) the compiler will read the file `HelloWorld.c`
- e) the compiler will overwrite the `HelloWorld` file if it already exists

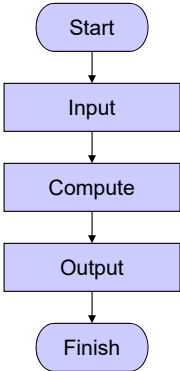

EECS10: Computational Methods in ECE, Lecture 3

(c) 2019 R. Doemer

12

Program Structure

- **General Program Structure**
 - Input
 - read input data
 - Computation
 - compute output data from input data
 - Output
 - write output data
- **Examples**
 - Calculator
 - Enter numbers, compute function, output result
 - Word processor
 - Type, format, print text
 - Database application
 - Enter data, process data, present data
 - etc.

```

graph TD
    Start([Start]) --> Input[Input]
    Input --> Compute[Compute]
    Compute --> Output[Output]
    Output --> Finish([Finish])
  
```

EECS10: Computational Methods in ECE, Lecture 3 (c) 2019 R. Doemer 13

C Program Structure

- **Initialization section**
 - Definition of variables (storage elements)
 - Name, type, and initial value
- **Input section**
 - read values from input devices into variables
 - standard input functions
- **Computation section**
 - perform the necessary computation on variables
 - assignment statements
- **Output section**
 - write results from variables to output devices
 - standard output functions
- **Exit section**
 - clean up and exit

EECS10: Computational Methods in ECE, Lecture 3 (c) 2019 R. Doemer 14

Our second C Program

- Program Example: Addition
 - Input
 - Let the user enter two whole numbers
 - Computation
 - Compute the sum of the two numbers
 - Output
 - Display the sum

EECS10: Computational Methods in ECE, Lecture 3

(c) 2019 R. Doemer

15

Our second C Program

- Program example: `Addition.c` (part 1/2)

```

/* Addition.c: adding two integer numbers */
/* */
/* author: Rainer Doemer */
/* */
/* modifications: */
/* 09/30/04 RD initial version */

#include <stdio.h>

/* main function */

int main(void)
{
    /* variable definitions */
    int i1 = 0; /* first integer */
    int i2 = 0; /* second integer */
    int sum; /* result */
    ...
  
```

EECS10: Computational Methods in ECE, Lecture 3

(c) 2019 R. Doemer

16

Our second C Program

- Program example: `Addition.c` (part 2/2)

```

...
/* input section */
printf("Please enter an integer:   ");
scanf("%d", &i1);
printf("Please enter another integer: ");
scanf("%d", &i2);

/* computation section */
sum = i1 + i2;

/* output section */
printf("The sum of %d and %d is %d.\n", i1, i2, sum);

/* exit */
return 0;
} /* end of main */

/* EOF */

```

EECS10: Computational Methods in ECE, Lecture 3

(c) 2019 R. Doemer

17

Our second C Program

- Variable definition and initialization

```

/* variable definitions */
int i1 = 0;      /* first integer */
int i2 = 0;      /* second integer */
int sum;         /* result */

```

- Variable type: **int**
 - integer type, stores whole numbers (e.g. -5, 0, 42)
 - many other types exist (**float**, **double**, **char**, ...)
- Variable name: **i1**
 - valid identifier, i.e. name composed of letters, digits
 - variable name should be descriptive
- Initializer: **= 0**
 - specifies the initial value of the variable
 - optional (if omitted, initial value is undefined)

EECS10: Computational Methods in ECE, Lecture 3

(c) 2019 R. Doemer

18

Our second C Program

- Data input using `scanf()` function

```
/* input section */
printf("Please enter an integer:   ");
scanf("%d", &i1);
```

- Function `scanf()` is defined in standard I/O library
 - declared in header file `stdio.h`
- ... reads data from the standard input stream `stdin`
 - `stdin` usually means the keyboard
- ... converts input data according to format string
 - `"%d"` indicates that a decimal integer value is expected
- ... stores result in specified location
 - `&i1` indicates to store at the *address of variable i1*

Our second C Program

- Computation using assignment statements

```
/* computation section */
sum = i1 + i2;
```

- Operator `=` specifies an assignment
 - value of the right-hand side (`i1 + i2`) is assigned to the left-hand side (`sum`)
 - left-hand side is usually a variable
 - right-hand side is a simple or complex expression
- Operator `+` specifies addition
 - left and right arguments are added
 - result is the sum of the two arguments
- Many other operators exist
 - For example, `-`, `*`, `/`, `%`, `<`, `>`, `==`, `^`, `&`, `|`, ...

Our second C Program

- Data output using `printf()` function

```
/* output section */
printf("The sum of %d and %d is %d.\n", i1, i2, sum);
```

- Function `printf()` is defined in standard I/O library
 - declared in header file `stdio.h`
- ... writes data to the standard output stream `stdout`
 - `stdout` usually means the monitor
- ... converts output data according to format string
 - text ("The sum...") is copied verbatim to the output
 - "%d" is replaced with a decimal integer value
- ... takes values from specified arguments (in order)
 - `i1` indicates to use the value of the variable `i1`

Our second C Program

- Example session: `Addition.c`

```
% vi Addition.c
% ls -l
-rw----- 1 doemer faculty 702 Sep 30 14:17 Addition.c
% gcc -Wall -ansi Addition.c -o Addition
% ls -l
-rwx----- 1 doemer faculty 6628 Sep 30 16:44 Addition*
-rw----- 1 doemer faculty 702 Sep 30 14:17 Addition.c
% Addition
Please enter an integer: 27
Please enter another integer: 15
The sum of 27 and 15 is 42.
% Addition
Please enter an integer: 123
Please enter another integer: -456
The sum of 123 and -456 is -333.
%
```

Basic Types in C

- Integer types
 - **char** Character, e.g. `'a'`, `'b'`, `'1'`, `'*'`
 - typical range [-128,127]
 - **short int** Short integer, e.g. -7, 0, 42
 - typical range [-32768,32767]
 - **int** Integer, e.g. -7, 0, 42
 - typical range [-2147483648,2147483647]
 - **long int** Long integer, e.g. -99L, 9L, 123L
 - typical range [-2147483648,2147483647]
 - **long long int** Very long integer, e.g. 12345LL
 - typical range [-9223372036854775808,9223372036854775807]
- Integer types can be
 - **signed** negative and positive values (incl. 0)
 - **unsigned** positive values only (incl. 0)

EECS10: Computational Methods in ECE, Lecture 3

(c) 2019 R. Doemer

23

Basic Types in C

- Floating point types
 - **float** Floating point with single precision
 - Example 3.5f, -0.234f, 10e8f
 - **double** Floating point with double precision
 - Example 3.5, -0.23456789012, 10e88
 - **long double** Floating point with high precision
 - Example 12345678.123456e123L
- Floating point values are in many cases *approximations* only!
 - Storage size of floating point values is fixed
 - Many values can only be represented as approximations
 - Example: $1.0/3.0 = .333333$

EECS10: Computational Methods in ECE, Lecture 3

(c) 2019 R. Doemer

24

Conversion Specifiers for Basic Types

Type	printf()	scanf()
• long double	%Lf	%Lf
• double	%f	%lf
• float	%f	%f
• unsigned long long	%llu	%llu
• long long	%lld	%lld
• unsigned long	%lu	%lu
• long	%ld	%ld
• unsigned int	%u	%u
• int	%d	%d
• short	%hd	%hd
• char	%c	%c

EECS10: Computational Methods in ECE, Lecture 3

(c) 2019 R. Doemer

25

Arithmetic Operations in C

- Arithmetic Operators
 - parentheses (,)
 - unary plus, minus +, -
 - multiplication, division, modulo *, /, %
 - addition, subtraction +, -
 - shift left, shift right <<, >>
- Evaluation order of expressions
 - usually left to right
 - by operator precedence
 - ordered as in table above (higher operators are evaluated first)
- Arithmetic operators are available
 - for integer types: all
 - for floating point types: all except %, <<, >>

EECS10: Computational Methods in ECE, Lecture 3

(c) 2019 R. Doemer

26

Shift Operators

- Left-shift operator: $\mathbf{x \ll n}$
 - shifts x in binary representation n times to the left
 - multiplies x n times by 2
 - Examples
 - $2x = \mathbf{x \ll 1}$
 - $4x = \mathbf{x \ll 2}$
 - $x * 2^n = \mathbf{x \ll n}$
 - $2^n = \mathbf{1 \ll n}$
- Right-shift operator: $\mathbf{x \gg n}$
 - shifts x in binary representation n times to the right
 - divides x n times by 2
 - Examples
 - $x / 2 = \mathbf{x \gg 1}$
 - $x / 4 = \mathbf{x \gg 2}$
 - $x / 2^n = \mathbf{x \gg n}$
